WIKI

Standard product portfolio

Pressure | Temperature | Level | Force | Flow | Calibration
As a family-run business acting globally, with 10,000 highly qualified employees, the WIKA group of companies is a worldwide leader in pressure and temperature measurement. The company also sets the standard in the measurement of level, force and flow, and in calibration technology.

Founded in 1946, WIKA is today a strong and reliable partner for all the requirements of industrial measurement technology, thanks to a broad portfolio of high-precision instruments and comprehensive services.

With manufacturing locations around the globe, WIKA ensures flexibility and the highest delivery performance. Every year, over 50 million quality products, both standard and customer-specific solutions, are delivered in batches of 1 to over 10,000 units.

With numerous wholly owned subsidiaries and partners, WIKA competently and reliably supports its customers worldwide. Our experienced engineers and sales experts are your competent and dependable contacts locally.
## Contents

In this brochure you will find standard products from all WIKA product lines.

Bourdon tube pressure gauges

Copper alloy

These pressure gauges are suitable for liquid and gaseous media, so long as they are not highly viscous or crystallising and do not attack copper alloy parts. The scale ranges cover pressures from 0.6 ... 1,000 bar. These instruments are manufactured in accordance with the European standard EN837-1 (except for model 111.11 and 111.12 in NS 27).

111.10, 111.12
Standard version

Nominal size 27, 40, 50, 63, 80, 100, 160 mm
Scale range -1 ... 0 to 0 ... 400 bar
Accuracy class 2.5, 1.6 optional
NS 27: 4.0
Data sheet PM 01.01, PM 01.17

111.11
Welding gauge ISO 5171

Nominal size 40, 50, 63 mm
Scale range 0 ... 0.6 to 0 ... 400 bar
Accuracy class 2.5
Data sheet PM 01.03

111.16, 111.26
Panel mounting series

Nominal size 40, 50, 63 mm, model 111.26 also 80 mm
Scale range -1 ... 0 to 0 ... 400 bar
Accuracy class 2.5
Data sheet PM 01.10

113.13
Plastic case, liquid filling

Nominal size 40, 50, 63 mm
Scale range -1 ... 0 to 0 ... 400 bar
Accuracy class 2.5
Data sheet PM 01.04

214.11
Edgewise panel design

Nominal size 96 x 96, 72 x 72
Scale range NS 96 x 96: 0 ... 0.6 to 0 ... 1,000 bar
NS 72 x 72: 0 ... 0.6 to 0 ... 400 bar
Accuracy class 1.6, 1.0
Data sheet PM 02.07
### 212.20
**Stainless steel case**

| Nominal size | 100, 160 mm |
| Scale range  | 0 … 0.6 to 0 … 1,000 bar |
| Accuracy class| 1.0 |
| Data sheet   | PM 02.01 |

### 213.40
**Heavy-duty version, case filling**

| Nominal size | 63, 80, 100 mm |
| Scale range  | -1 … 0 to 0 … 1,000 bar |
| Accuracy class| 1.0 (NS 100), 1.6 (NS 63 and 80) |
| Data sheet   | PM 02.06 |

### 113.53, 213.53
**Stainless steel case, case filling**

| Nominal size | 113.53: 40, 80, 100 mm  | 213.53: 50, 63, 100 mm |
| Scale range  | -1 … 0 to 0 … 1,000 bar |
| Accuracy class| 1.0 (NS 100), 1.6 (NS 50, 63) |
| Data sheet   | PM 01.08, PM 02.12 |

---

**Thermomanometers**

### MFT
**With capillaries, for pressure and temperature measurement**

| Nominal size | 40, 42, 52 mm |
| Scale range  | Pressure: 0 … 4 bar  |
|              | Temperature: 0 … 120 °C |
| Accuracy class| Pressure: 2.5 (EN 837-1)  |
|              | Temperature: 2.5 |
| Data sheet   | PM 01.20 |

### THM10
**Eco version, for pressure and temperature measurement**

| Nominal size | 63, 80 mm |
| Scale range  | Pressure: 0 … 4 to 0 … 10 bar  |
|              | Temperature: 0 … 120 °C |
| Connection location| Lower mount or back mount |
| Accuracy class| Pressure: 2.5 (EN 837-1)  |
|              | Temperature: 2 (EN 13190) |
| Data sheet   | PM 01.24 |

### 100.02
**For pressure and temperature measurement**

| Nominal size | 63, 80 mm |
| Scale range  | Pressure: 0 … 1 to 0 … 16 bar  |
|              | Temperature: 0 … 100 to 0 … 150 °C |
| Connection location| Lower mount or back mount |
| Accuracy class| Pressure: 2.5 (EN 837-1)  |
|              | Temperature: ±2.5 |
| Data sheet   | PM 01.23 |

Bourdon tube pressure gauges

Stainless steel

The wetted parts of these pressure gauges are manufactured entirely from stainless steel. Thus they are suitable for gaseous and liquid aggressive media that are not highly viscous or crystallising, also in aggressive environments. They are suitable for scale ranges from 0 ... 0.6 to 0 ... 7,000 bar.

Depending on the pressure range and the instrument model, overload safety of up to a maximum of 5 x full scale value is possible. To this point, the measurement accuracy is maintained. Liquid filling the case ensures a precise instrument display, even with high dynamic pressure loads and vibrations.

Test gauges

For highest accuracy

Depending on the instrument model, accuracies of 0.1, 0.25 or 0.6 % of full scale value can be measured.

The pressure ranges cover from 0 … 6 mbar to 0 … max. 1,600 bar and are suitable for calibration tasks. For each of the pressure gauges specified here, a DKD/DAkkS certificate can be provided.

Further information at www.wika.com
The application areas for diaphragm pressure gauges are very versatile. They are the specialists in the process industry when it comes to critical measuring tasks such as with highly corrosive or viscous media or when it comes to low pressures and high overload. The scale ranges are from as low as 0 ... 16 mbar to typically 0 ... 25 to 0 ... 40 bar. Depending on the pressure range and the instrument model, overload safety of 3 x or 5 x full scale value is possible as standard.

For special designs, an overload safety of up to 400 bar is possible, with the measurement accuracy maintained. Diaphragm pressure gauges are even suitable for highly viscous or contaminated media by using an open connecting flange (per DIN/ASME). For measuring particularly aggressive media, the complete wetted surface can be lined with a large selection of special materials (e.g. PTFE, Hastelloy, tantalum, and many more).

**422.12, 423.12**

Grey cast iron case

- **Nominal size**: 100, 160 mm
- **Scale range**: 0 ... 16 mbar to 0 ... 40 bar
- **Accuracy class**: 1.6
- **Ingress protection**: IP54, with liquid filling IP65
- **Data sheet**: PM 04.02

**432.50, 433.50**

For the process industry, high overload safety up to the 10-fold full scale value, max. 40 bar

- **Nominal size**: 100, 160 mm
- **Scale range**: 0 ... 16 mbar to 0 ... 25 bar
- **Accuracy class**: 1.6
- **Ingress protection**: IP54, with liquid filling IP65
- **Data sheet**: PM 04.03

**432.36, 432.56**

For the process industry, high overload safety to 40, 100 or 400 bar

- **Nominal size**: 100, 160 mm
- **Scale range**: 0 ... 16 mbar to 0 ... 40 bar
- **Accuracy class**: 1.6
- **Ingress protection**: IP54, with liquid filling IP65
- **Data sheet**: PM 04.07
Capsule pressure gauges

For very low pressures

These measuring instruments are particularly suited to gaseous media. The scale ranges are between 0 … 2.5 mbar and 0 … 1,000 mbar in accuracy classes from 0.1 to 2.5. Capsule pressure gauges consist of two circular, corrugated diaphragms, joined together around the edge with a pressure-tight seal. Overload protection is possible in certain cases.

| Ingress protection | IP54 |
| Data sheet    | PM 06.06 |

Further information at www.wika.com
Differential pressure gauges work with a wide range of pressure elements. With this variety, measuring ranges from 0 ... 0.5 mbar to 0 ... 1,000 bar and static overlay pressures up to 400 bar are possible. These measuring instruments monitor:

- the pollution degree in filter systems
- the level in closed vessels
- the overpressure in clean rooms
- the flow of gaseous and liquid media
- and they control pumping plants

### 700.01, 700.02

Absolute pressure gauges

Absolute pressure gauges are used when measured pressures are independent of the natural fluctuations in atmospheric pressure. The pressure of the measured media is determined against a reference pressure, which corresponds to the absolute pressure zero point. For this, the reference chamber is completely evacuated, so that there is a near-perfect vacuum in it.

Applications for these high-precision measuring instruments are, for example, monitoring of vacuum pumps and vacuum packaging machines. They are also used in laboratories, in order to monitor condensation pressures or to determine the vapour pressure of liquids.

532.52, 532.53, 532.54

High overload safety

| Nominal size  | 100, 160 mm |
| Scale range   | 0 ... 25 mbar to 0 ... 25 bar abs., high overload safety |
| Accuracy class| 1.0 or 1.6 or 2.5 |
| Ingress protection | IP54, with liquid filling IP65 |
| Data sheet    | PM 05.02 |
# Digital pressure gauges

## DG-10
**Digital pressure gauge for general industrial applications**

Pressure sensors

**A-10**
For industrial applications

- **Non-linearity** (± % of span) ≤ 0.25 or 0.5 BFSL
- **Measuring range**
  - 0 ... 0.05 to 0 ... 1,000 bar
  - 0 ... 0.1 to 0 ... 25 bar abs.
  - -0.05 ... 0 to -1 ... 24 bar
- **Special feature**
  - Compact design
  - Free test report
  - 2 million possible variants
- **Data sheet** PE 81.60

**S-20**
For superior industrial applications

- **Non-linearity** (± % of span) ≤ 0.125, 0.25 or 0.5 BFSL
- **Measuring range**
  - 0 ... 0.1 to 0 ... 1,600 bar
  - 0 ... 0.4 to 0 ... 16 bar abs.
  - -0.4 ... 0 to -1 ... 59 bar
- **Special feature**
  - Extreme operating conditions
  - Customer-specific variants
  - Free test report
- **Data sheet** PE 81.61

**S-11**
Flush diaphragm

- **Non-linearity** (± % of span) ≤ 0.2 BFSL
- **Measuring range**
  - 0 ... 0.1 to 0 ... 600 bar
  - 0 ... 0.25 to 0 ... 16 bar abs.
  - -0.1 ... 0 to -1 ... 24 bar
- **Special feature**
  - Flush process connection
  - Medium temperature to 150 °C
  - Comprehensive stocks
- **Data sheet** PE 81.02

**IS-3**
Intrinsic safety Ex i

- **Non-linearity** (± % of span) ≤ 0.2 BFSL
- **Measuring range**
  - 0 ... 0.1 to 0 ... 6,000 bar
  - 0 ... 0.25 to 0 ... 25 bar abs.
  - -1 ... 0 to -1 ... 24 bar
- **Special feature**
  - Further worldwide Ex approvals
  - High-pressure version (optional)
  - Flush process connection (optional)
- **Data sheet** PE 81.58

**E-10, E-11**
Flameproof enclosure Ex d

- **Non-linearity** (± % of span) ≤ 0.5 BFSL
- **Measuring range**
  - 0 ... 0.4 to 0 ... 1,000 bar
  - 0 ... 0.4 to 0 ... 16 bar abs.
  - -1 ... 0 to -1 ... 25 bar
- **Special feature**
  - Low-power version
  - For sour gas applications (NACE)
  - Flush process connection (optional)
  - Further worldwide Ex approvals
- **Data sheet** PE 81.27

**A-1200**
With IO-Link, PNP or NPN switching output

- **Accuracy** (± % of span) ≤ 0.5 or ≤ 1
- **Measuring range**
  - 0 ... 0.4 to 0 ... 1,000 bar
  - 0 ... 0.4 to 0 ... 25 bar abs.
  - 1 ... 0 to -1 ... 24 bar
- **Special feature**
  - IO-Link version 1.1
  - Medium temperature to +125 °C
  - Multicolour 360° LED status display
- **Data sheet** PE 81.90
**HP-2**

For highest pressure applications to 15,000 bar

- **Accuracy**
  - (± % of span) ≤ 0.25 or 0.5
- **Measuring range**
  - 0 ... 1,600 to 0 ... 15,000 bar
- **Special feature**
  - Very high long-term stability
  - Excellent load cycle stability
  - Cavitation protection (optional)
- **Data sheet** PE 81.53

---

**M-10, M-11**

Spanner width 19 mm

- **Non-linearity**
  - (± % of span) ≤ 0.2 BFSL
- **Measuring range**
  - 0 ... 6 to 0 ... 1,000 bar
- **Special feature**
  - Small spanner width 19 mm
  - Flush connection G ¼ available
- **Data sheet** PE 81.25

---

**P-30, P-31**

For precision measurements

- **Non-linearity**
  - (± % of span) ≤ 0.04 BFSL
- **Measuring range**
  - 0 ... 0.25 to 0 ... 1,000 bar
  - 0 ... 0.25 to 0 ... 25 bar abs.
  - -1 ... 0 to -1 ... +15 bar
- **Special feature**
  - No additional temperature error in the range 10 ... 60 °C
  - Flush process connection (optional)
  - Analogue, CANopen® or USB
- **Data sheet** PE 81.54

---

**MHC-1**

For mobile working machines, CANopen® or J1939

- **Accuracy**
  - (± % of span) ≤ 1 or 0.5
- **Measuring range**
  - 0 ... 60 to 0 ... 1,000 bar
- **Special feature**
  - Tested for harsh environmental conditions
  - Robust instrument design
  - Version with integrated Y-connector
- **Data sheet** PE 81.49

Further information at www.wika.com
OEM pressure sensors

**O-10**
For industrial applications

- **Non-linearity** (± % of span) ≤ 0.5 BFSL
- **Measuring range**
  - 0 ... 6 to 0 ... 600 bar
  - -1 ... 5 to -1 ... +59 bar
- **Special feature**
  - For OEM quantities
  - Customer-specific variants
  - Special version for applications with water as medium
  - 5-fold overload safety
- **Data sheet** PE 81.65

**MH-4**
For mobile working machines

- **Non-linearity** (per IEC 61298-2) ≤ ±0.25 % of span (BFSL)
- **Measuring range**
  - 0 ... 40 to 0 ... 1,000 bar
- **Special feature**
  - Developed for the extreme operating conditions in mobile working machines
  - Reliability and highest accuracy over the entire life cycle
  - Customer-specific adaptations and individualisation
  - High production capacities
- **Data sheet** PE 81.63

**MH-3-HY**
For mobile hydrogen applications

- **Accuracy** (± % of span) ≤ 1
- **Measuring range**
  - 0 ... 20 to 0 ... 600 bar
- **Special feature**
  - Approval per EC79/2009
  - Compact and robust design
  - Diagnostic function (optional)
- **Data sheet** PE 81.59

**MG-1**
For medical gases

- **Non-linearity** (± % of span) ≤ 0.5 BFSL
- **Measuring range**
  - 0 ... 6 to 0 ... 400 bar
- **Special feature**
  - Cleaned, packed and labelled for oxygen per international standards
- **Data sheet** PE 81.44

**R-1**
For refrigeration and air-conditioning applications

- **Accuracy** (± % of span) ≤ 2
- **Measuring range**
  - 0 ... 6 to 0 ... 160 bar
  - -1 ... 7 to -1 ... +45 bar
- **Special feature**
  - Special case design for the best possible condensation tightness
  - Resistant to all common refrigerants
  - Welded parts from stainless steel
- **Data sheet** PE 81.45
Pressure sensor assemblies and modules

Customer-specific electronic pressure measurement solutions

We see ourselves not only as a provider of top quality measurement technology, but also as a highly competent partner that is able to create individually designed solutions together with you. We are ready to develop products for you that are tailor made to cater for your individual needs. Create your perfect pressure sensor solution together with us. Here, the experience from a multitude of completed projects is incorporated - thus we can refer back to numerous proven solutions and components. As required, we will adapt our systems to your individual application or develop new ones.

Talk to us – we are happy to provide you with advice!

TTF-1
Metal thin-film pressure sensor assembly

- Non-linearity (± % of span) ≤ 0.5
- Measuring range 0 … 10 to 0 … 1,000 bar
- Special feature ■ Excellent resistance to media ■ Welded measuring cell
- Signal mV/V
- Data sheet PE 81.16

SCT-1
Ceramic pressure sensor element

- Non-linearity (± % of span) ≤ 0.5
- Measuring range 0 … 2 to 0 … 100 bar
- Special feature Excellent resistance to media
- Signal mV/V
- Data sheet PE 81.40

SPR-2, TPR-2
Piezo pressure sensor element and pressure sensor assembly

- Non-linearity (± % of span) ≤ 0.3
- Measuring range 0 … 0.4 to 0 … 16 bar
- Special feature ■ Gauge and absolute pressure measurement ■ High output signal ■ High overload safety
- Signal mV/V
- Data sheet PE 81.62

TI-1
Piezo or metal thin-film pressure sensor module

- Non-linearity (± % of span) ≤ 0.125 BFSL
- Measuring range 0 … 0.4 to 0 … 1,600 bar
- Special feature ■ Processed signal ■ High variance in process connections
- Signal Analogue and digital
- Data sheet PE 81.57

MPR-1
Pressure sensor module

- Non-linearity (± % of span) ≤ 0.125 or 0.25
- Measuring range 0 … 0.4 to 0 … 25 bar
- Special feature ■ 19 mm spanner width for limited mounting space ■ No calibration necessary, due to compensated output signal
- Signal Analogue and digital
- Data sheet PE 81.64

Further information at www.wika.com
Pressure gauges with output signal

The multi-functional intelliGAUGEs present a cost-effective and, at the same time, reliable solution for nearly all pressure measurement applications. They combine the analogue indication of a mechanical pressure gauge, needing no external power, with the electrical output signal of a pressure sensor. These hybrid instruments are available with all commonly used electrical signals. The sensor works in a non-contact way, without any influence on the measuring signal. Many instruments are available in versions for use in hazardous areas.

Depending on the pressure gauge, the following electrical output signals are possible:

- 0.5 … 4.5 V ratiometric
- 4 … 20 mA, 2-wire
- 4 … 20 mA, 2-wire with Ex approvals
- 0 … 20 mA, 3-wire
- 0 … 10 V, 3-wire

For pressure gauges with nominal sizes 100 and 160 mm, the electrical output signals can also be combined with switch contacts.

### PGT21
Bourdon tube, stainless steel case

- Nominal size: 50, 63 mm
- Scale range: 0 … 1.6 to 0 … 400 bar
- Accuracy class: 2.5
- Ingress protection: IP65 (IP67 optional)
- Data sheet: PV 11.03

### PGT23.063
Bourdon tube, for the process industry, safety version

- Nominal size: 63 mm
- Scale range: 0 … 1 to 0 … 1,000 bar
- Accuracy class: 1.6
- Ingress protection: IP54, filled IP65
- Data sheet: PV 12.03

### PGT23.100, PGT23.160
Bourdon tube, for the process industry, standard or safety version

- Nominal size: 100, 160 mm
- Scale range: 0 … 0.6 to 0 … 1,600 bar
- Accuracy class: 1.0
- Ingress protection: IP54, filled IP65
- Data sheet: PV 12.04

### PGT43
Diaphragm element, for the process industry, high overload safety up to the 10-fold full scale value, max. 40 bar

- Nominal size: 100, 160 mm
- Scale range: 0 … 16 mbar to 0 … 25 bar
- Accuracy class: 1.6
- Ingress protection: IP54, with liquid filling IP65
- Data sheet: PV 14.03

### PGT43HP
Diaphragm element, for the process industry, high overload safety to 40, 100 or 400 bar

- Nominal size: 100, 160 mm
- Scale range: 0 … 16 mbar to 0 … 40 bar
- Accuracy class: 1.6
- Ingress protection: IP54, with liquid filling IP65
- Data sheet: PV 14.07

### PGT63HP
Capsule element, for the process industry, high overload safety

- Nominal size: 100, 160 mm
- Scale range: 2.5 … 100 mbar
- Accuracy class: 1.6
- Ingress protection: IP54
- Data sheet: PV 16.06
### DPGT43
**Differential pressure, for the process industry, all-metal media chamber**

<table>

</table>
Control systems are gaining more and more importance in industrial applications. Consequently, mere pressure indication on the measuring instrument itself is no longer sufficient, rather the measured value must be transferred to the control system via an electrical signal, e.g. by closing or opening of a circuit. WIKA is focusing on its contact pressure gauges in order to satisfy this trend.

All instruments with inductive contacts are certified in accordance with ATEX Ex ia.

Depending on the model the following contacts are built-in:
- Magnetic snap-action contact, e.g. model 821, for general applications
- Inductive contact model 831, for hazardous areas
- Electronic contact model 830 E, for PLC
- Reed contact model 851, for general applications and PLC
- Micro switch model 850
- Transistor output NPN or PNP

Contact pressure gauges

PGS21
Bourdon tube, stainless steel case

- Nominal size: 40, 50, 63 mm
- Scale range: 0 ... 2.5 to 0 ... 400 bar
- Accuracy class: 2.5
- Ingress protection: IP65
- Special feature: Version with VdS or LPCB approval possible
- Data sheet: PV 21.02

PGS25
Bourdon tube, with electronic pressure switch, stainless steel case

- Nominal size: 50, 63 mm
- Scale range: 0 ... 1.6 to 0 ... 400 bar
- Accuracy class: 2.5
- Ingress protection: IP65
- Data sheet: PV 21.04

PGS21.100, PGS21.160
Bourdon tube, stainless steel case

- Nominal size: 100, 160 mm
- Scale range: 0 ... 0.6 to 0 ... 600 bar
- Accuracy class: 1.0
- Ingress protection: IP54
- Data sheet: PV 22.01

PGS23.100, PGS23.160
Bourdon tube, for the process industry, standard or safety version

- Nominal size: 100, 160 mm
- Scale range: 0 ... 25 mbar to 0 ... 25 bar
- Accuracy class: 1.6
- Ingress protection: IP65, with liquid filling IP65
- Data sheet: PV 24.03

PGS23.063
Bourdon tube, for the process industry, safety version

- Nominal size: 63 mm
- Scale range: 0 ... 4 to 0 ... 400 bar
- Accuracy class: 1.6
- Ingress protection: IP65
- Data sheet: PV 22.03

PGS43.100, PGS43.160
Diaphragm element, for the process industry, high overload safety up to the 10-fold full scale value, max. 40 bar

- Nominal size: 100, 160 mm
- Scale range: 0 ... 25 mbar to 0 ... 25 bar
- Accuracy class: 1.6
- Ingress protection: IP54, with liquid filling IP65
- Data sheet: PV 24.03
### 432.36, 432.56 with 8xx

- **Diaphragm element, for the process industry, high overload safety to 100 or 400 bar**
- **Nominal size**: 100, 160 mm
- **Scale range**: 0 ... 25 mbar to 0 ... 40 bar
- **Accuracy class**: 1.6
- **Ingress protection**: IP54, with liquid filling IP65
- **Data sheet**: PV 24.07

### 532.53 with 8xx

- **Absolute pressure, for the process industry, high overload safety**
- **Nominal size**: 100, 160 mm
- **Scale range**: 0 ... 25 mbar to 0 ... 25 bar abs.
- **Accuracy class**: 1.6
- **Ingress protection**: IP54, with liquid filling IP65
- **Data sheet**: PV 25.02

### 632.51 with 8xx

- **Capsule element, for the process industry, high overload safety**
- **Nominal size**: 100, 160 mm
- **Scale range**: 0 ... 2.5 to 0 ... 100 mbar
- **Accuracy class**: 1.6
- **Ingress protection**: IP54
- **Data sheet**: PV 26.06

### DPGS40

- **Differential pressure, with micro switches, with integrated working pressure indication (DELTA-comb)**
- **Nominal size**: 100 mm
- **Scale range**: 0 ... 0.25 to 0 ... 10 bar
- **Accuracy class**: 2.5 (1.6 optional)
- **Ingress protection**: IP65
- **Data sheet**: PV 27.20

### DPGS43

- **Differential pressure, for the process industry, all-metal media chamber**
- **Nominal size**: 100, 160 mm
- **Scale range**: 0 ... 16 mbar to 0 ... 25 bar
- **Accuracy class**: 1.6
- **Ingress protection**: IP65, filled IP65
- **Data sheet**: PV 27.55

### DPGS43HP

- **Differential pressure, for the process industry, high overload safety to 400 bar**
- **Nominal size**: 100, 160 mm
- **Scale range**: 0 ... 60 mbar to 0 ... 40 bar
- **Accuracy class**: 1.6
- **Ingress protection**: IP65, filled IP65
- **Data sheet**: PV 27.13

# Pressure switches

## Electronic pressure switches

### PSD-4

**Electronic pressure switch with display**

- **Accuracy** (± % of span): ≤ 0.5
- **Measuring range**: 0 ... 0.4 to 0 ... 1,000 bar
- **Special feature**: Intuitive and fast setup
- **Output signals**: NPN/PNP, mA/VDC
- **Data sheet**: PE 81.86

### PSD-4-ECO

**Electronic pressure switch with display**

- **Accuracy** (± % of span): ≤ 1.0
- **Measuring range**: 0 ... 0.4 to 0 ... 1,000 bar
- **Special feature**: Good/bad indication through parameterisable digital display (red/green)
- **Data sheet**: PE 81.69

### A-1200

**With IO-Link, PNP or NPN switching output**

- **Accuracy** (± % of span): ≤ 0.5 or ≤ 1
- **Measuring range**: 0 ... 0.4 to 0 ... 1,000 bar
- **Special feature**: IO-Link version 1.1
- **Data sheet**: PE 81.90

Further information at www.wika.com
Due to the use of high-quality micro switches, the mechanical pressure switches are notable for their high precision and long-term stability. Furthermore, the direct switching of electrical loads up to AC 250 V/20 A is enabled, while simultaneously ensuring a high switch point reproducibility.

The instruments come with a SIL certificate and are thus particularly suited for safety-critical applications. In addition, with their ‘intrinsically safe’ and ‘flameproof enclosure’ ignition protection types the pressure switches are ideally suited for permanent use in hazardous environments. All mechanical pressure switches for the process industry are available with EAC certificate and technical passport.

Diaphragm seal systems

These combinations of diaphragm seals and pressure gauges or pressure sensors feature fast availability. They are particularly suitable for demanding measuring tasks in the pharmaceutical and biotechnology industries, food and beverage industries, and through to the oil & gas, chemical, petrochemical and semiconductor industries.

The diaphragm seal systems can be used for processes with gases, compressed air or vapour, with liquid, pasty, powdery and crystallising media and also with aggressive, adhesive, corrosive, highly viscous, environmentally hazardous or toxic media.

With flange connection

DSS26M
With pressure gauge per EN 837-1, internal diaphragm
Applications with small flange process connections in the process industry
PN max. 40 bar
System fill fluid KN2
Data sheet DS 95.09

DSS26T
With high-quality pressure sensor, internal diaphragm
Applications with small flange process connections in the process industry
PN max. 40 bar
System fill fluid KN2
Data sheet DS 95.10

With threaded connection

DSS34M
With pressure gauge per EN 837-1, welded design
Applications with high requirements in the chemical, petrochemical and water treatment industries
PN max. 60 bar
System fill fluid KN2 for general applications
Data sheet DS 95.15

DSS34T
With high-quality pressure sensor, welded design
Applications with high requirements in the chemical, petrochemical and water treatment industries
PN max. 60 bar
System fill fluid KN2 for general applications
Data sheet DS 95.16

The diaphragm seal is directly welded to the pressure gauge or pressure sensor. The diaphragm made of stainless steel provides for the separation from the medium. The pressure is transmitted to the measuring instrument via the system fill fluid which is inside the diaphragm seal system.

Extensive information can be found in our brochure “Diaphragm seals – combinations and accessories” at www.wika.de.

Extensive information can be found in our brochure “Diaphragm seal systems with short delivery times” at www.wika.de.
Electrical accessories

**A-Al-1, A-IAI-1**

**LCD attachable indicator, 50 x 50 mm**

- Input: 4 ... 20 mA, 2-wire
- Supply voltage: From the 4 ... 20 mA current loop
- Special feature: Model A-Al-1 intrinsically safe per ATEX
- Data sheet: AC 80.07

**M12 x 1 cable**

**Cable assemblies M12 x 1**

- Circular connector M12 x 1, 4- and 5-pin
- Straight and angled version
- 2, 5 or 10 m cable
- Ingress protection IP67

**IS Barrier**

**Intrinsically safe repeater power supply**

- 1-channel input 0/4 ... 20 mA
- Intrinsically safe [Ex ia], supplying and non-supplying
- Galvanic isolation
- Bidirectional HART® signal transmission
- Suitable for SIL 2 per IEC 61508/IEC 61511
- Data sheet: AC 80.14

**905**

**Contact protection relay for model 821 switch contacts**

- Application: For optimal contact protection and highest switching reliability
- Data sheet: AC 08.01

**904**

**Control unit for inductive contacts model 831**

- Application: For operating measuring instruments with inductive switch contacts
- Data sheet: AC 08.01
Valves and mounting accessories

**IV1x, IV2x, IV3x, IV5x**  
Instrumentation valve

- **Application:** For the shutting off, pressure compensation and venting of pressure measuring instruments
- **Version:** Needle valve and multiport valve
- **Material:** Stainless steel
- **Nominal pressure:** To PN 420 (6,000 psi), Option: To PN 680 (10,000 psi)
- **Data sheet:** AC 09.19, AC 09.22, AC 09.23

**BV**  
Ball valve

- **Application:** First shut-off valve for pressure tap to local instrument installation, media distribution, drain or vent in pipelines
- **Version:** Process and instrument version
- **Material:** Stainless steel 316L
- **Nominal pressure:** To PN 420 (6,000 psi), Option: To PN 680 (10,000 psi)
- **Data sheet:** AC 09.28

**IVM**  
Monoflange

- **Application:** For shutting off and venting pressure measuring instruments with flange connection
- **Version:** Flange connection per ASME or EN
- **Material:** Stainless steel
- **Nominal pressure:** To PN 420 (6,000 psi)
- **Data sheet:** AC 09.17

**IBF2, IBF3**  
Monoblock

- **Application:** For mounting to level indicators or differential pressure instruments in level measurement
- **Version:** Per ASME or EN
- **Material:** Stainless steel
- **Nominal pressure:** To PN 690 bar (10,000 psi)
- **Data sheet:** AC 09.25

**910.14, 910.16, 910.17**  
Connection adapters, instrument mounting brackets and sealings

- **Application:** For mounting and sealing pressure gauges
- **Data sheet:** AC 09.05, AC 09.07, AC 09.08

Dial thermometers

Our dial thermometers work on the bimetal, expansion or gas actuation principle. This enables scale ranges of -200 … +700 °C in different class accuracies, response times and resilience to environmental influences. Diverse connection designs, stem diameters and individual stem lengths enable a flexible measuring point design.

Dial thermometers with remote capillaries are particularly versatile. All thermometers are suited for operation in a thermowell if necessary.

Dial thermometers

Gas-actuated thermometers

R73, S73, A73
Axial and radial, adjustable stem and dial

Nominal size: 100, 160 mm
Scale range: -200 ... +100 to 0 ... +700 °C
Wetted parts: Stainless steel
Option: Liquid dampening (case), Contact bulb
Data sheet: TM 73.01

F73
With capillary

Nominal size: 100, 160 mm
Scale range: -200 ... +100 to 0 ... +700 °C
Wetted parts: Stainless steel
Option: Armoured or coated capillary (PVC coating), Liquid dampening (case), Contact bulb
Data sheet: TM 73.01

75
Highly vibration resistant

Nominal size: 100 mm
Scale range: 0 ... +700 or -50 ... +650 °C
Wetted parts: Stainless steel
Option: Various neck tube and insertion lengths
Data sheet: TM 75.01

Thermomanometers

MFT
With capillaries, for pressure and temperature measurement

Nominal size: 40, 42, 52 mm
Scale range:
- Pressure: 0 ... 4 bar
- Temperature: 0 ... 120 °C
Accuracy class:
- Pressure: 2.5 (EN 837-1)
- Temperature: 2.5
Data sheet: PM 01.20

THM10
Eco version, for pressure and temperature measurement

Nominal size: 63, 80 mm
Scale range:
- Pressure: 0 ... 4 to 0 ... 10 bar
- Temperature: 0 ... 120 °C
Connection location: Lower mount or back mount
Accuracy class:
- Pressure: 2.5 (EN 837-1)
- Temperature: 2 (EN 13190)
Data sheet: PM 01.24

100.02
For pressure and temperature measurement

Nominal size: 63, 80 mm
Scale range:
- Pressure: 0 ... 1 to 0 ... 16 bar
- Temperature: 0 ... 100 to 0 ... 150 °C
Accuracy class:
- Pressure: 2.5 (EN 837-1)
- Temperature: 2.5 °C
Data sheet: PM 01.23
Dial thermometers with output signal

**TGT70**

Expansion thermometer with output signal

- Nominal size: 63, 100 mm
- Scale range: -40 … +60 to 0 … 250 °C
- Wetted parts: Stainless steel
- Option:
  - Capillary
  - Output signals 4 … 20 mA or 0.5 … 4.5 V
  - Other connection designs
- Data sheet: TV 18.01

**TGT73**

Gas-actuated thermometer with output signal

- Nominal size: 100, 160 mm
- Scale range: -200 … +100 to 0 … 700 °C
- Wetted parts: Stainless steel
- Option:
  - Capillary
  - Liquid dampening (case)
  - Output signal 4 … 20 mA or 0 … 10 V
- Data sheet: TV 17.10

Thermocouples

Thermocouples generate a voltage directly dependent on temperature. They are particularly suitable for high temperatures to 1,700 °C (3,092 °F) and for very high oscillating stresses. For thermocouples, the accuracy classes per IEC 60584-1 and ASTM E230 apply.

In our range of products you will find all market-standard instrument versions. If required, a temperature transmitter can be installed in the connection head.

**TC10-A**
Measuring insert

- Sensor element: Types K, J, E, N or T
- Measuring range: -40 … +1,200 °C, -40 … +2,192 °F
- Measuring location: Ungrounded or grounded
- Data sheet: TE 65.01

**TC10-B**
For additional thermowell

- Sensor element: Types K, J, E, N or T
- Measuring range: -40 … +1,200 °C, -40 … +2,192 °F
- Measuring location: Ungrounded or grounded
- Data sheet: TE 65.02

**TC10-C**
Threaded, with fabricated thermowell

- Sensor element: Types K, J, E, N or T
- Measuring range: -40 … +1,200 °C, -40 … +2,192 °F
- Measuring location: Ungrounded or grounded
- Process connection: Mounting thread
- Data sheet: TE 65.03

**TC10-D**
Threaded, miniature design

- Sensor element: Types K, J, E, N or T
- Measuring range: -40 … +600 °C, -40 … +1,112 °F
- Measuring location: Ungrounded or grounded
- Process connection: Mounting thread
- Data sheet: TE 65.04

**TC10-F**
Flanged thermocouple, with fabricated thermowell

- Sensor element: Types K, J, E, N or T
- Measuring range: -40 … +1,200 °C, -40 … +2,192 °F
- Measuring location: Ungrounded or grounded
- Process connection: Flange
- Data sheet: TE 65.06

**TC10-H**
Without thermowell

- Sensor element: Types K, J, E, N or T
- Measuring range: -40 … +1,200 °C, -40 … +2,192 °F
- Measuring location: Ungrounded or grounded
- Process connection: Mounting thread
- Data sheet: TE 65.08

## Thermocouples

### TC40
- **Cable thermocouple**
- **Sensor element**: Types K, J, E, N or T
- **Measuring range**: -40 ... +1,200 °C, -40 ... +2,192 °F
- **Measuring location**: Ungrounded or grounded
- **Cable**: Silicone, PTFE, fiberglass, PVC
- **Data sheet**: TE 65.40

### TC46
- **Hot runner thermocouple**
- **Sensor element**: Type J or K
- **Measuring range**: -25 ... +400 °C, -13 ... +752 °F
- **Measuring location**: Ungrounded or grounded
- **Special feature**: Probe diameter 0.5 ... 3.0 mm
- **Data sheet**: TE 66.46

### TC47
- **Thermocouple for plastics machinery**
- **Sensor element**: Types J or K
- **Measuring range**: -25 ... +400 °C, -13 ... +752 °F
- **Measuring location**: Ungrounded or grounded
- **Special feature**: Various process connections
- **Data sheet**: TE 67.20

### TC50
- **Surface thermocouple**
- **Sensor element**: Types K, J, E, N or T
- **Measuring range**: -40 ... +1,200 °C, -40 ... +2,192 °F
- **Measuring location**: Ungrounded or grounded
- **Process connection**: Surface mounting
- **Data sheet**: TE 65.50

### TC53
- **Bayonet thermocouple**
- **Sensor element**: Types K, J, E, N or T
- **Measuring range**: -40 ... +1,200 °C, -40 ... +2,192 °F
- **Measuring location**: Ungrounded or grounded
- **Special feature**: Single and dual thermocouple, Explosion-protected versions
- **Data sheet**: TE 65.53

### TC59
- **Tubeskin thermocouple**
- **Sensor element**: Type K or N
- **Measuring range**: 0 ... 1,200 °C, 32 ... 2,192 °F
- **Measuring location**: Welded or exchangeable
- **Process connection**: Surface mounting
- **Data sheet**: TE 65.56 ... TE 65.59

Resistance thermometers

Resistance thermometers are equipped with platinum sensor elements which change their electrical resistance as a function of temperature. In our range of products you will find resistance thermometers with connected cable as well as versions with connection head. A temperature transmitter can be installed directly in the connection head.

Resistance thermometers are suitable for applications between -196 ... +600 °C, -320 ... +1,112 °F (dependent on instrument model, sensor element, accuracy class and materials coming into contact with the medium).

Resistance thermometers are available in classes AA, A and B in accordance with IEC 60751.

TR53
Bayonet resistance thermometer

Sensor element 1 x Pt100, 2 x Pt100
Measuring range -196 ... +400 °C, -320 ... +752 °F
Connection method 2-, 3- and 4-wire
Process connection Bayonet
Data sheet TE 60.53

TR55
With spring-loaded tip

Sensor element 1 x Pt100, 2 x Pt100
Measuring range -196 ... +500 °C, -320 ... +932 °F
Connection method 2-, 3- and 4-wire
Process connection Compression fitting
Data sheet TE 60.55

TR57-M
Pipe surface resistance thermometer for clamping

Sensor element 1 x Pt100
Measuring range -20 ... +150 °C, -4 ... +302 °F
Connection method Pt100 3-wire, 4 ... 20 mA
Data sheet TE 60.57

TR60
Indoor and outdoor resistance thermometer

Sensor element 1 x Pt100, 2 x Pt100
Measuring range -40 ... +80 °C, -40 ... +176 °F
Connection method 2-, 3- and 4-wire
Process connection Wall mounting
Data sheet TE 60.60

TR75
DiwiTherm® with digital indicator

Measuring range -40.0 ... +199.9 °C, +200 ... +450 °C with automatic measuring range changeover (autorange)
Power supply Battery operation
Data sheet TE 60.75

TR81
For flue gas temperature measurements

Sensor element 1 x Pt100, 2 x Pt100
Measuring range -196 ... +600 °C, -320 ... +1,112 °F
Connection method 2-, 3- and 4-wire
Thermowell Metal
Data sheet TE 60.81

TR95
Multipoint resistance thermometer in band design

Sensor Pt100
Measuring range -196 ... +600 °C, -320 ... +1,112 °F
Connection method 2-, 3- and 4-wire
Process connection Various process connections
Data sheet TE 70.01
Resistance thermometers

**TF37**
Threaded thermometer with connection lead

- Measuring range: -50 ... +260 °C
- Measuring element: Pt100, Pt1000, NTC, KTY, Ni1000
- Special feature:
  - High vibration resistance
  - Connection lead from PVC, silicone, PTFE
  - Brass or stainless steel thermowell
- Data sheet: TE 67.12

**TF40**
Duct thermometer

- Measuring range: -50 ... +200 °C
- Measuring element: Pt100, Pt1000, NTC
- Special feature:
  - Smallest case design, UV-resistant
  - Protected against dust and water jets, IP65
  - Mounting flange from plastic
- Data sheet: TE 67.16

**TF44**
Strap-on thermometer with connection lead

- Measuring range: -50 ... +200 °C
- Measuring element: Pt100, Pt1000, NTC, KTY
- Special feature:
  - Connection lead from PVC, silicone, PTFE
  - Aluminium probe sleeve
  - Protected against dust and water jets, IP65
  - With quick-mounting clip
- Data sheet: TE 67.14

**TF45**
OEM insertion thermometer with connection lead

- Measuring range: -50 ... +260 °C
- Measuring element: Pt100, Pt1000, NTC, KTY, Ni1000
- Special feature:
  - Connection lead from PVC, silicone, PTFE
  - Probe sleeve from stainless steel
  - Protected against dust and water jets, IP65
- Data sheet: TE 67.15

**TF35**
OEM threaded thermometer, with plug connection

- Measuring range: -50 ... +200 °C
- Measuring element: Pt100, Pt1000, NTC, KTY, Ni1000
- Feature:
  - Compact design
  - Very high vibration resistance
  - Ingress protection of IP54 to IP69K, depending on the connector
  - Brass or stainless steel thermowell
- Data sheet: TE 67.10

**TF37**
Threaded thermometer with connection lead

- Measuring range: -50 ... +260 °C
- Measuring element: Pt100, Pt1000, NTC, KTY, Ni1000
- Special feature:
  - High vibration resistance
  - Connection lead from PVC, silicone, PTFE
  - Brass or stainless steel thermowell
- Data sheet: TE 67.12

**TF40**
Duct thermometer

- Measuring range: -50 ... +200 °C
- Measuring element: Pt100, Pt1000, NTC
- Special feature:
  - Smallest case design, UV-resistant
  - Protected against dust and water jets, IP65
  - Mounting flange from plastic
- Data sheet: TE 67.16

**TF44**
Strap-on thermometer with connection lead

- Measuring range: -50 ... +200 °C
- Measuring element: Pt100, Pt1000, NTC, KTY
- Special feature:
  - Connection lead from PVC, silicone, PTFE
  - Aluminium probe sleeve
  - Protected against dust and water jets, IP65
  - With quick-mounting clip
- Data sheet: TE 67.14

**TF45**
OEM insertion thermometer with connection lead

- Measuring range: -50 ... +260 °C
- Measuring element: Pt100, Pt1000, NTC, KTY, Ni1000
- Special feature:
  - Connection lead from PVC, silicone, PTFE
  - Probe sleeve from stainless steel
  - Protected against dust and water jets, IP65
- Data sheet: TE 67.15
Temperature transmitters

**T15**
Digital temperature transmitter for resistance sensors
- Input: Resistance thermometers, potentiometers
- Accuracy: $< 0.1 \%$
- Output: $4 \ldots 20 \text{ mA}$
- Special feature: The fastest and simplest configuration on the market
- Data sheet: TE 15.01

**T16**
Digital temperature transmitter for thermocouples
- Input: All commercially available thermocouples
- Accuracy: Typical $< 2 \text{ K}$
- Output: $4 \ldots 20 \text{ mA}$
- Special feature: The fastest and simplest configuration on the market
- Data sheet: TE 16.01

**T91**
Analogue temperature transmitter 3-wire, $0 \ldots 10 \text{ V}$
- Input: Resistance thermometers, thermocouples
- Accuracy: $< 0.5 \text{ or } < 1 \%$
- Output: $0 \ldots 10 \text{ V}, 0 \ldots 5 \text{ V}$
- Special feature: Fixed measuring range
- Data sheet: TE 91.01, TE 91.02

**T32**
HART® temperature transmitter
- Input: Resistance thermometers, thermocouples, potentiometers
- Accuracy: $< 0.1 \%$
- Output: $4 \ldots 20 \text{ mA}, \text{HART}^\circledR\text{ protocol}$
- Special feature: TÜV certified SIL version (full assessment)
- Data sheet: TE 32.04

**TIF50, TIF52**
HART® field temperature transmitter
- Input: Resistance thermometers, thermocouples, potentiometers
- Accuracy: $< 0.1 \%$
- Output: $4 \ldots 20 \text{ mA}, \text{HART}^\circledR\text{ protocol}$
- Special feature: PC configurable
- Data sheet: TE 62.01

Temperature switches

Temperature switches for industrial applications

**TSD-30**
Electronic temperature switch with display

- Measuring range: -20 … +80 °C, -20 … +120 °C, 0 … 150 °C
- Output: Switching outputs PNP or NPN, 4 … 20 mA, 0 … 10 V, IO-Link 1.1
- Data sheet: TE 67.03

**TFS35**
Bimetal temperature switch

- Switching temperature: 50 … 155 °C, fixed
- Special feature: Switching voltage to AC 48 V, DC 24 V
- Data sheet: TV 35.01

**TFS135**
Bimetal temperature switch for voltages to AC 250 V

- Switching temperature: 50 … 130 °C, fixed
- Special feature: Switching voltages up to AC 250 V
- Data sheet: TV 35.02

Temperature switches for the process industry

**TXS, TXA**
Mini temperature switches

- Setting range: -15 … +20 to 180 … 250 °C
- Ignition protection type: Ex ia or Ex d
- Switch: 1 x SPDT
- Switching power: AC 220 V/5 A, DC 24 V/5 A
- Data sheet: TV 31.70, TV 31.72

**TCS, TCA**
Compact temperature switches

- Setting range: -30 … +10 to 160 … 250 °C
- Ignition protection type: Ex ia or Ex d
- Switch: 1 x SPDT or 1 x DPDT
- Switching power: AC 250 V/15 A, DC 24 V/2 A
- Data sheet: TV 31.64, TV 31.65

**TWG, TAG**
Heavy-duty version

- Setting range: -30 … +70 to 0 … 600 °C
- Ignition protection type: Ex ia or Ex d
- Switch: 1 or 2 SPDT or 1 x DPDT
- Switching power: AC 250 V/20 A, DC 24 V/2 A
- Data sheet: TV 31.60, TV 31.61
## Thermometers with switch contacts

### SC15
**Expansion thermometer with micro switch, indicating temperature controller**

- **Nominal size**: 60, 80, 100 mm
- **Scale range**: -100 to +400 °C
- **Wetted parts**: Stainless steel version
- **Option**: Liquid dampening to max. 250 °C
- **Data sheet**: TV 28.02

### SB15
**Expansion thermometer with micro switch, safety temperature limiter**

- **Nominal size**: 60, 80, 100 mm
- **Scale range**: 0 to 400 °C
- **Wetted parts**: Copper alloy
- **Option**: Sheet steel version
- **Data sheet**: TV 28.03

### TGS55
**Bimetal thermometer, stainless steel version**

- **Nominal size**: 100 mm
- **Scale range**: -70 to +30 to 0 to 600 °C
- **Wetted parts**: Stainless steel
- **Option**: Liquid dampening to max. 250 °C
- **Data sheet**: TV 25.01

### TGS73
**Gas-actuated thermometer, stainless steel version**

- **Nominal size**: 100, 160 mm
- **Scale range**: -200 to +100 to 0 to 700 °C
- **Wetted parts**: Stainless steel
- **Option**: Capillary, Liquid dampening (case)
- **Data sheet**: TV 27.01

### 70 with 8xx
**Expansion thermometer with micro switch**

- **Nominal size**: 100 mm
- **Scale range**: -60 to +40 to 0 to 250 °C
- **Wetted parts**: Stainless steel
- **Option**: Various contact versions
- **Data sheet**: TV 28.01

Thermowells

Whether in aggressive or abrasive process media, whether in high- or low-temperature ranges: For electrical or mechanical thermometers, to prevent direct exposure of their temperature probes to the medium, thermowells that suit each application are available. Thermowells can be machined from solid-body material or assembled from tube sections and can either be screw-, weld- or flange-fitted.

They are offered in standard and special materials such as stainless steel 1.4571, 316L, Hastelloy® or titanium. Each version, depending on its construction type and its mounting to the process, has certain advantages and drawbacks with respect to its load limits and the special materials that can be used.

Bypass level indicators

Continuous level measurement via visual indication of the level without supply voltage

Applications
- Continuous level indication without supply voltage
- Indication of the level proportional to height
- Individual design and corrosion-resistant materials make the products suitable for a broad range of applications
- Chemical industry, petrochemical industry, oil and natural gas extraction (on- and offshore), shipbuilding, machine building, power generating equipment, power plants
- Process water and drinking water treatment, food and beverage industry, pharmaceutical industry

Special features
- Process- and procedure-specific production
- Operating limits: □ Operating temperature: T = -196 °C ... +450 °C
  □ Operating pressure: P = vacuum to 400 bar 1)
  □ Limit density: ρ ≥ 340 kg/m³
- Wide variety of different process connections and materials
- Mounting of level transmitters and magnetic switches possible as an option
- Explosion-protected versions

1) Individual limit values. For application limits, the joint consideration of temperature and pressure is required.

# External chambers

The external chamber model BZG consists of an external chamber vessel that is mounted laterally to a vessel using at least 2 process connections (flange, thread or weld stub). Through this type of arrangement, the level in the external chamber vessel corresponds to the level in the vessel. The level is measured by a measuring instrument inserted additionally in the external chamber vessel, for example model FLR or FLS, or by a guided wave radar.

## Applications
- Level detection for almost all liquid media
- Individual design and corrosion-resistant materials make the products suitable for a broad range of applications
- Chemical industry, petrochemical industry, oil and natural gas extraction (on- and offshore), shipbuilding, machine building, power generating equipment, power plants

## Special features
- Process- and procedure-specific production
- Operating limits:
  - Operating temperature: \( T = -196 \ldots +450 \, ^\circ C \)
  - Operating pressure: \( P = \text{Vacuum to 400 bar} \)
- Wide variety of different process connections and materials
- Mounting of level transmitters and guided wave radars possible as an option

1) Individual limit values. For application limits, the joint consideration of temperature and pressure is required.

Glass level gauges

Direct level indication without supply voltage

Applications
- Continuous level indication without supply voltage
- Direct indication of the level
- Individual design and corrosion-resistant materials make the products suitable for a broad range of applications
- Chemical, petrochemical industry, oil and natural gas extraction (on- and offshore), shipbuilding, machine building, power generating equipment, power plants
- Oil and gas, heat transfer and refrigeration systems, plants for cryogenics

Special features
- Process- and procedure-specific production
- Operating limits: □ Operating temperature: T = -196 … +374 °C ¹)
  □ Operating pressure: Vacuum to 250 bar ¹)
- Wide variety of different process connections and materials
- Illumination optional
- Heating and/or insulation optional

¹) Individual limit values. For application limits, the joint consideration of temperature and pressure is required.

Submersible pressure sensors

Hydrostatic level measurement

Applications
- Level measurement in rivers and lakes
- Control of sewage lift and pumping stations
- Monitoring of sewage, settling and rainwater retention basins
- Level measurement in vessel and storage systems for oils and fuels

Special features
- Slimline and hermetically sealed design up to 300 m water column
- Highly resistant versions available
- Explosion protection per ATEX, IECEx, FM and CSA
- Drinking water conformity per KTW and ACS
- Temperature output, HART® and low-power output signal for battery operation

LS-10
For general applications

- Accuracy (±% of span) ≤ 0.5
- Measuring range 0 ... 0.25 to 0 ... 10 bar
- Output signal 4 ... 20 mA (2-wire)
- Data sheet PE 81.55

LF-1
For superior applications

- Accuracy (±% of span) ≤ 0.5 or ≤ 1
- Measuring range 0 ... 0.1 to 0 ... 6 bar
- Output signal 4 ... 20 mA (2-wire)
- Special feature Suitable for measurements in contaminated and aggressive media
- Output signal 4 ... 20 mA + HART® (2-wire)
- Data sheet PE 81.55

LH-20
High-performance

- Accuracy (±% of span) ≤ 0.2 or 0.1
- Measuring range 0 ... 0.1 to 0 ... 25 bar
- Output signal 4 ... 20 mA (2-wire)
- Special feature Scalable measuring range (optional)
- Output signal 4 ... 20 mA + HART® + PT100
- Data sheet PE 81.56
Continuous measurement with float for industrial applications

With reed measuring chain

Applications
- Level measurement of liquids in machine building
- Control and monitoring tasks for hydraulic power packs, compressors and cooling systems

Special features
- Media compatibility: Oil, water, diesel, refrigerants and other liquids
- Permissible medium temperature: -30 … +120 °C
- Output signals for level and temperature (optional) as resistance output signal or 4 ... 20 mA current output
- Accuracy, resolution: 24, 12, 10, 6 or 3 mm

### RLT-1000
#### Stainless steel version

- **Accuracy**: 24, 12, 10, 6 or 3 mm
- **Output signal**: Resistance signal or 4 ... 20 mA
- **Temperature**: -30 ... +80 °C (-30 ... +120 °C optional)
- **Guide tube length**: 150 ... 1,500 mm
- **Data sheet**: LM 50.02

### RLT-2000
#### Plastic version

- **Accuracy**: 24, 12, 10, 6 or 3 mm
- **Output signal**: Resistance signal or 4 ... 20 mA
- **Temperature**: -10 ... +80 °C (-30 ... +120 °C optional)
- **Guide tube length**: 150 ... 1,500 mm
- **Data sheet**: LM 50.01

### RLT-3000
#### Stainless steel version with temperature output signal

- **Accuracy**: 24, 12, 10, 6 or 3 mm
- **Output signal**: Level output signal 4 ... 20 mA
- **Temperature**: 4 ... 20 mA, Pt1000
- **Temperature**: -30 ... +100 °C
- **Guide tube length**: 150 ... 1,500 mm
- **Data sheet**: LM 50.05

Applications
- Level measurement of liquids in machine building
- Control and monitoring tasks for hydraulic power packs, compressors and cooling systems

Special features
- Media compatibility: Oil, water, diesel, refrigerants and other liquids
- Permissible medium temperature: -30 … +120 °C
- Output signals for level and temperature (optional) as resistance output signal or 4 ... 20 mA current output
- Accuracy, resolution: 24, 12, 10, 6 or 3 mm

With reed measuring chain
Continuous measurement with float for the process industry

**Applications**
- High-accuracy level detection for almost all liquid media
- Chemical, petrochemical industry, natural gas, offshore, shipbuilding, machine building, power generating equipment, power plants
- Process water and drinking water treatment, food and beverage industry, pharmaceutical industry

**Special features**
- Process- and procedure-specific solutions possible
- Operating limits:
  - Operating temperature: T = -90 ... +450 °C
  - Operating pressure: P = vacuum to 100 bar
  - Limit density: \( \rho \geq 400 \text{ kg/m}^3 \)
- Resolution < 0.1 mm
- Wide variety of different electrical connections, process connections and materials
- Explosion-protected versions

---

**FLM-S**
**Stainless steel version**

- Process connection: Mounting thread
- Flange: DIN, ANSI
- Guide tube length: Max. 6,000 mm
- Pressure: 0 ... 200 bar
- Temperature: -90 ... +450 °C
- Density: \( \geq 400 \text{ kg/m}^3 \)
- Data sheet: LM 20.01

**FLM-CA**
**Compact version for process applications**

- Process connection: Mounting thread downwards
  - G 1/2" ... G 2"
  - NPT 1/2" ... NPT 2"
- Mounting flange
  - ANSI 1/2" ... 2 1/2", class 150 ... 300

Float switches for industrial applications

Applications
- Level measurement of liquids in machine building
- Control and monitoring tasks for hydraulic power packs, compressors and cooling systems

Special features
- Media compatibility: Oil, water, diesel, refrigerants and other liquids
- Permissible medium temperature range: -30 ... +150 °C
- Up to 4 switching outputs freely definable as normally open, normally closed or change-over contact
- Optional temperature output signal, selectable as preconfigured bimetal switch or either Pt100 or Pt1000

### RLS-1000
- **Stainless steel version**
- Switching output: Up to 4 (normally closed, normally open, change-over contact)
- Medium temperature: -30 ... +80 °C (-30 ... +150 °C optional)
- Guide tube length: 60 ... 1,500 mm
- Data sheet: LM 50.03

### RLS-2000
- **Plastic version**
- Switching output: Up to 4 (normally closed, normally open, change-over contact)
- Medium temperature: -10 ... +80 °C (-30 ... +120 °C optional)
- Guide tube length: 70 ... 1,500 mm
- Data sheet: LM 50.04

### RLS-3000
- **Stainless steel version, with temperature output signal**
- Switching output: Up to 3 (normally closed, normally open, change-over contact)
- Temperature output: Normally closed, normally open, Pt100, Pt1000
- Medium temperature: -30 ... +80 °C (-30 ... +150 °C optional)
- Guide tube length: 60 ... 1,500 mm
- Data sheet: LM 50.06

Float switches for the process industry

Robust switches for liquid media

Applications
- Level measurement for almost all liquid media
- Pump and level control and monitoring of distinct filling levels
- Chemical, petrochemical industry, natural gas, offshore, shipbuilding, machine building, power generating equipment, power plants
- Process water and drinking water treatment, food and beverage industry

Special features
- Large range of application due to the simple, proven functional principle
- For harsh operating conditions, long service life
- Operating limits: □ Operating temperature: $T = -196 \ldots +350 \, ^\circ C$
  - Operating pressure: $P = \text{vacuum to 40 bar}$
  - Limit density: $\rho \geq 300 \, \text{kg/m}^3$
- Wide variety of different electrical connections, process connections and materials
- Explosion-protected versions

Optoelectronic switches for the process industry

For applications with limited mounting space

Applications
- Chemical, petrochemical, natural gas, offshore industries
- Shipbuilding, machine building, refrigerator units
- Power generating equipment, power plants
- Process water and drinking water treatment
- Wastewater and environmental engineering

Special features
- Temperature ranges from -269 … +400 °C
- Versions for pressure ranges from vacuum to 500 bar
- Special versions: High pressure, interface measurement
- Explosion-protected versions
- Signal processing is made using a separate model OSA-S switching amplifier

OLS-S, OLS-H
Standard and high-pressure version

Optoelectronic level switches for industrial applications

Applications
- Limit detection of liquids
- Machine tools
- Hydraulics
- Machine building
- Water technology

Special features
- For liquids such as oils, water, distilled water, aqueous media
- Compact design
- Mounting position as required
- Accuracy ±2 mm
- No moving components

Optoelectronic limit level switches – for general applications in machine building

### OLS-C01
**Standard version**

- **Material**: Stainless steel, borosilicate glass
- **Process connection**: G ¼", G ½" or M12 x 1
- **Pressure**: Max. 25 bar
- **Temperature**: -30 ... +100 °C
- **Switching output**: 1 x PNP
- **Data sheet**: LM 31.31

### OLS-C02
**With selectable switch length**

- **Material**: Stainless steel, borosilicate glass
- **Process connection**: G ½"
- **Pressure**: Max. 25 bar
- **Temperature**: -30 ... +100 °C
- **Switch length**: 65 ... 1,500 mm
- **Switching output**: 1 x PNP
- **Data sheet**: LM 31.32

### OLS-C05
**High-temperature version**

- **Material**: Stainless steel, borosilicate glass
- **Process connection**: G ½"
- **Pressure**: Max. 25 bar
- **Temperature**: -40 ... +170 °C
- **Switching output**: 1 x PNP
- **Data sheet**: LM 31.33

Optoelectronic level switches
for industrial applications

Optoelectronic limit level switches – application specialists

**OLS-C51**
Intrinsic safety Ex i

- Material: Stainless steel, borosilicate glass
- Process connection: G ½"
- Pressure: Max. 40 bar
- Temperature: -30 … +135 °C
- Output signal: 4 … 20 mA low/high as switching output
- Data sheet: LM 31.04

**OLS-C04**
For refrigeration technology

- Material: Steel, nickel-plated; melted glass
- Process connection: G ½", ½" NPT
- Pressure: Max. 40 bar
- Temperature: -40 … +100 °C
- Switching output: 1 x PNP
- Data sheet: LM 31.34

**OLS-5200**
For the shipbuilding industry

- Material: Stainless steel, borosilicate glass
- Process connection: Male thread G ½" or M18 x 1.5
- Pressure: Max. 25 bar
- Temperature: -40 … +130 °C
- Switching output: 1 x PNP
- Vibration resistance: 10 … 5,000 Hz, 0 … 60 g
- Data sheet: LM 31.06
Accessories

The comprehensive accessory programme includes a wide variety of electronic equipment required for the evaluation and indication of our sensors.

### 904
**Control unit for inductive contacts**

- **Application**: For operating measuring instruments with inductive contacts
- **Data sheet**: AC 08.01

### IS Barrier
**Intrinsically safe repeater power supply**

- 1-channel input 0/4 ... 20 mA
- Intrinsically safe [Ex ia], supplying and non-supplying
- Galvanic isolation
- Bidirectional HART® signal transmission
- Suitable for SIL 2 per IEC 61508/IEC 61511
- Data sheet AC 80.14

### DI35
**Digital indicator for panel mounting, 96 x 48 mm**

- **Input**: Multi-function input for resistance thermometers, thermocouples and standard signals
- Alternatively double input for standard signals with calculation function (+ \( \times \) /)
  for two transmitters
- **Alarm output**: 2 or 4 relays (optional)
- **Special feature**: Integrated transmitter power supply
- **Supply voltage**: AC/DC 100 ... 240 V
  DC 10 ... 40 V, AC 18 ... 30 V
- **Data sheet**: AC 80.03

### DI32-1
**Digital indicator for panel mounting, 48 x 24 mm**

- **Input**: Multi-function input for resistance thermometers, thermocouples and standard signals
- **Alarm output**: 2 electronic contacts
- **Supply voltage**: DC 9 ... 24 V
- **Data sheet**: AC 80.13

Compression force transducers

Compression force transducers are designed for determining compression forces and are suitable for static and dynamic measurements in the direct force flow. WIKA force transducers are manufactured from stainless steel and other high-quality materials, are robust and are notable for their reliability and high quality even in complex applications. Our compression force transducers are available in different rated loads.

They cover a wide range of application areas: For instance, these force sensors are employed in machine building or in the automation of plants to determine the pressing and joining forces, as well as for detecting weight in many industrial applications. You can select the pertinent technical and regional approvals as options.

Tension/compression force transducer

WIKA offers tension/compression force transducers in different designs and versions. They are available in miniature designs, as traditional s-type, as transducers with different thread forms or as low-profile force transducers. Transducers in miniature design are used for small mounting spaces and also for detecting small forces. The s-type with female thread, which is very well suited for this purpose, features a particularly high accuracy and is used in rated load ranges of up to 50 kN. For measuring high forces, tension/compression force transducers in compact design are the first choice. For low-profile force transducers, the force is transmitted via the centrical female thread. They are highly dynamic and possess a high fatigue strength.

F2220
Miniature tension/compression force transducer, from 10 N

F2221
Tension/compression force transducer from 10 N

F2222
Tension/compression force transducer up to 2,200 kN

F2226
Tension/compression force transducer, male thread to 3,300 kN
Bending/shear beams

Bending beams and shear beams are used for the determination of (shear) forces and are suitable for both static (weighing technology) and dynamic (machine building) measurement projects. To determine how strong the force is in the application, strain gauges or thin-film sensors are used, which are attached on or in the measuring body.

The fields of application of the bending beam and shear beam are many and varied. Thus, these load cells are very often used in industrial weighing technology as well as in the areas of special machine building, factory automation and stage construction. In addition, they are used in the laboratory and process industry for the indirect determination of torques.
**Load cells**

Load cells are designed as a special form of force transducers for use in weighing equipment. They enable very high measurement accuracies between 0.01 % and 0.05 % $F_{\text{nom}}$. Typical and widely used load cell geometries are single point load cells, bending and shear beam load cells, s-type load cells, pendulum load cells and compression force load cells. In addition, there are corresponding mounting kits and complete weighing modules available.

**Load pins**

Load pins represent one of the most important components for measuring forces. Existing retention bolts can easily be replaced by these products in existing applications. The application areas range from construction machinery and cranes to stage construction. These force transducers are often used by designers, because, due to their design, they can be directly integrated into the force flow, without taking up space. Since the design requirements for the use of load pins are very individual, the exact layout is important. With WIKA, you will have specialists by your side who already have lots of experience in force measurement.

Ring force transducers

These force transducers are extremely robust and are suitable for the detection of very high (static) forces. Furthermore, they are suitable for many installation situations. The ring geometry is used in force measurement for a wide variety of spatial conditions. The main fields of application are found in spindle presses, in screw force measurement or even in geotechnology.

WIKAs electrical and hydraulic ring force transducers in diameters from 12 millimetres up to 430 millimetres as well as in various installation heights. Discover our portfolio now.

We refer to force transducers that do not fit into any standard design as special force transducers. Due to the specification of the requirement, in some cases design-engineered solutions must be considered. As a long-standing manufacturer of force measurement technology, WIKA brings this expertise into play and can find the best and, at the same time, most economical solution for the customer.

Among our special force transducers are, for example, force sensors for determining the weight of containers (twistlock sensors) or for checking rope tension (wire rope force transducers). The applications in which special force transducers are used are wide-ranging and always require great experience in their engineering. You can count on this when you trust in the right solution from WIKA.
In order to determine the inclination of machines or machine parts precisely, WIKA now offers a wide range of inclination sensors. The sensors contain a dielectric medium whose surface, as in a spirit level, always aligns horizontally due to gravity.

Typical application areas of inclination sensors are cranes, aerial platforms, wind turbines or mobile working machines. Application in offshore installations for oil and gas extraction is also possible.

**N1101**

**Inclination sensor, single-axis, 1-channel**

- Measuring range: 0 … 360° (other measuring ranges on request)
- Relative linearity error: ■ < 100° - < 0.1° ■ > 100° - < 0.1 % of FS
- Output signal: 4 … 20 mA, 3-wire
- Ingress protection: IP67
- Data sheet: FO 59.01

**N131C**

**Ex inclination sensor, redundant**

- Measuring range: 0 … 90°, 0 … 180° or 0 … 360° (other measuring ranges on request)
- Relative linearity error: ■ < 100° - < 0.1° ■ > 100° - < 0.1 % of FS
- Output signal: 2 x 4 … 20 mA, 3-wire
- Ingress protection: IP67
- Data sheet: FO 59.02
Electronics

Many force measurement applications can be complemented by electronic components. To ensure that all system-relevant components come from a single source, WIKA continuously expands its product range with useful electronics. WIKA offers controllers, amplifiers, limit switches, hand-held measuring instruments, digital indicators and electronic accessories that ensure trouble-free operation. With the help of electronics matched to the measuring components, set limit values are maintained and checked with the reading instruments. Amplifiers are available with analogue and digital output signals. The LED display or LCD are available with 4 or 6 digits.

EZE09
Analogue cable amplifier for strain gauge resistance thermometry bridges

Input
Resistance thermometry bridge, 4- or 6-wire

Output
0 /4 … 20 mA, DC 0 … 10 V

Special feature
High accuracy
Cable length between amplifier and read-out unit: up to 100 m are possible
Compact design
Zero point and span adjustable

Supply voltage
DC 12 … 28 V

Data sheet
AC 50.03

ELMS1
Safety electronics PLe in accordance with DIN EN ISO 13849-1

Input
8 safe 4 … 20 mA analogue inputs
8 safe digital inputs
Fieldbus: Optionally PROFIBUS® PA, Profinet®, EtherCAT® and CANopen®

Output
2 safe relay outputs
6 safe, positive-switching semiconductor outputs
Fieldbus: Optionally PROFIBUS® PA, Profinet®, EtherCAT® and CANopen®

Special feature
Certified safety electronics, certified in accordance with DIN EN ISO 13849-1, PLe
Certified system solution incl. force measurement, certified in accordance with DIN EN 13849-1 cat. 3, PLd
Complex functionality, easy to configure via PC
Complete system available in a control cabinet

Supply voltage
DC 24 V

Data sheet
AC 50.06

EGS80
Digital limit switch

Input
0 /4 … 20 mA

Output
Two potential-free relay contacts (change-over) with status LED
One freely programmable analogue output (0 … 20 mA)

Special feature
Galvanic isolation, line break (LB) and short-circuit (SC) monitoring
Easy setting of extensive functions on the instrument or via PC software
Up to SIL 2 in accordance with IEC 61508

Supply voltage
DC 20 … 90 V
AC 48 … 253 V

Data sheet
AC 50.01

Further information at www.wika.com
Orifice plates represent the most common primary flow elements in the world due to their proven technology and ease of installation and maintenance.

Main characteristics
- Maximum operating temperature up to 800 °C
- Maximum operating pressure up to 400 bar
- Suitable for liquid, gas and steam flow measurement
- Accuracy: Uncalibrated ±0.5 … 2.5 %
- Repeatability of measurement 0.1 %

Versions
- Square edge orifice plates (standard version)
  This design is intended for general applications in clean liquids and gases.
- Quarter circle and conical entrance orifice plates
  The best choice for measurement of liquids with low Reynolds number.
- Segmental orifice plates
  For measurements with two-phase, dirty and particle-laden media.
- Eccentric orifice plates
  The application areas are similar to the segmental version. However, an eccentric orifice plate is the better solution for smaller pipe diameters.

1) The actual measuring deviation is specified during the engineering phase
Orifice flanges are intended for use instead of standard pipe flanges when an orifice plate or flow nozzle must be installed. Pairs of pressure tappings are machined into the orifice flange, making separate orifice carriers or tappings in the pipe wall unnecessary.

**Main characteristics**
- Wide range of materials available
- The number and type of pressure tapping (flange tap or corner tap) can be manufactured to customer requirements
- Special assemblies can be designed on request

**FLC-FL**

Orifice flanges

**Standards**
- ISO 5167-2

**Pipe size**
- ≥ 2"
- ≥ 50 mm
- Depending on version

**Accuracy**
- Uncalibrated ±0.5 … 2.5%

**Data sheet**
- FL 10.01

Annular chambers are designed to be mounted between standard pipe flanges. Versions are available to suit all common flange standards, including DIN and ANSI B16.5.

**Main characteristics**
- Standard material is 316/316L stainless steel, but a wide range of alternative materials is available
- Sealings are included in the scope of delivery (as standard, 4.4 mm thick spiral-wound sealing 316/graphite filler, unless requested otherwise)
To ensure high accuracy in the flow measurement of liquids, gases and steam the primary flow element is supplied as an assembly incorporating the upstream and downstream pipe sections required by ISO 5167-1:2003. This assembly is known as a “meter run”.

**Main characteristics**
- Nominal width < 1 ½"
- Nominal pressure rating 300 … 2,500 depending on model/version
- Wide range of materials available

A calibration of the instrument can be performed if higher accuracy is required.

An integral orifice plate is normally selected when the pipe diameter is 1 ½" or smaller and the medium is clean. An extremely compact installation can be ensured as the pressure sensor can be mounted directly onto the meter run. Without a calibration, an accuracy of ±1 … 2 % can be expected, the actual values will be confirmed during the engineering phase.

---

**FLC-HHR-PP**
**HHR ProPak™ flow meter for oil and gas**
- **Pipe size**: 2", 3", 4", 6" or 8"
- **β and pipe length**: 0.75 or 0.40
- **Special feature**: No need for straight upstream and downstream pipes
- **Data sheet**: FL 10.07

**FLC-HHR-FP**
**HHR FlowPak® flow meter**
- **Pipe size**: 3 … 24"
- **β and pipe length**: 0.75 or 0.40
- **Special feature**: No need for straight upstream and downstream pipes
- **Data sheet**: FL 10.09

**FLC-WG**
**Wedge flow meter for slurries and highly viscous media**
- **Pipe size**: ½ … 24"
- **H/D ratios**: 0.2/0.3/0.4/0.5
- **Special feature**: Low maintenance through robust design
- **Special feature**: For very high and very low Reynolds numbers
- **Bidirectional measurement possible**
- **Data sheet**: FL 10.08
Flow nozzles

A flow nozzle consists of a convergent section with a rounded profile and a cylindrical throat. This design is generally selected for steam flow measurement at high velocity.

To reduce pressure loss an axisymmetric solution, called a Venturi nozzle, can be offered. It combines the standard features of a flow nozzle with a divergent section.

Main characteristics
- Suitable for liquid, gas and steam flow measurement
- Optimum solution for measuring the flow of steam
- Accuracy: Uncalibrated ±0.8 … 2 %
- Repeatability of measurement 0.1 %
- Ensure a lower pressure loss compared to orifice plate family.

1) The actual measuring deviation is specified during the engineering phase
A Venturi tube is a reliable and easily managed and maintained instrument that can measure a wide range of clean liquids and gases.

The main advantage of a Venturi tube over other differential pressure flow measuring instruments is the higher pressure recovery and the lower upstream and downstream straight tube length requirements.

Main characteristics

- In accordance with ISO 5167-4 & ASME MFC-3M standards
- Fabricated from plate or machined from bar/forgings
- Flanged or weld-in construction
- Wide range of materials available
- Pipe sizes from 50 ... 1,200 mm
- Wide variety of pressure tappings available
- Calibration possible on request
- Accuracy: Uncalibrated ±1 ... 1.5 %
FloTec (averaging pitot tubes)

FloTec (a multi-port, averaging pitot tube) measures the difference between the static pressure and the dynamic pressure of the media in the pipe. The volumetric flow is calculated from that difference using Bernoulli’s principle and taking into account the pipe inner diameter. Using four dynamic ports this instrument is able to evaluate a better velocity profile inside the pipe. This ensures a higher accuracy in the flow measurement.

**Main characteristics**
- Low installation costs
- Long-term accuracy
- Minimal permanent pressure loss
- Fixed and extractable versions available

**Vortex shedding frequency**
Depending on the inner diameter, the medium characteristics and the Reynolds number, a vortex will be generated around the pitot tube. A support mounted on the opposite side of the pipe can be supplied should the natural frequency of the pitot coincide with the vortex shedding frequency. The necessity test is performed during the design phase.

---

|           | ≥ 50 ... 1,800 mm |
| Accuracy  | Uncalibrated ±3% |
| Data sheet| FL 10.05 |
When a reduction of pressure or a limitation of the flow rate is required, a restriction orifice must be inserted into the pipeline. Our technical department will produce the correct design for the restriction orifice, depending on customer requirements and flow conditions.

If high differential pressures, a change in phase or sonic issues can occur, a more-complex design will be required. The solution in these cases is to decrease the differential pressure in several steps, avoiding all the issues created by these factors. This solution is called multi-step restriction orifice.

**Main characteristics**
- Multi-step restriction orifices to reduce the pressure by more than 50% of the inlet value
- Multi-bore designs to reduce the noise level

Flow switches are used for the display and monitoring of the flow of liquid and gaseous media. The instruments feature a high switching accuracy and functional safety, low switch hysteresis and continuous switch point setting by the operator.

The wide selection of WIKA flow switches also includes viscosity-compensated models and ATEX-certified instruments for use in hazardous environments.

Digital pressure gauges

High-quality digital pressure gauges from WIKA

Precision digital pressure gauges are suitable for stationary and also mobile measurement and display of pressures. In addition, a digital pressure gauge can be used as a pressure reference and enables the easy testing, adjustment and calibration of other pressure measuring equipment directly on-site. Through efficient measuring cells with electronic linearisation of the characteristic curve, a high accuracy is achieved.

Hand-helds, calibrators

Hand-helds are portable calibration instruments for mobile use for the accurate measurement and recording of pressure profiles. There are interchangeable pressure sensors with measuring ranges of up to 10,000 bar available for the instruments. Through this, hand-helds are particularly suitable as test instruments for a large variety of applications in the widest range of industries. Data recorded in the hand-held can be evaluated via PC software, some instruments document calibrations in the internal memory, which are later read on a PC. Optionally, a calibration certificate can be generated with our calibration software WIKA-Cal.

Precision pressure measuring instruments

Precision pressure measuring instruments are electrical measuring systems which convert pressure into an electrical signal and optionally visualise it. Precise pressure transmitters and process transmitters are used for the monitoring and control of particularly sensitive processes.

Due to the low, DKD/DAkkS certified measurement uncertainty down to 0.008% of the entire measuring chain, the particularly accurate instruments find their primary applications as a factory/working standard for testing and/or calibrating a variety of pressure measuring instruments.

**CPT2500**
**USB pressure transmitter**
- Measuring range: 0 ... 0.025 to 0 ... 1,000 bar
- Accuracy: 0.2%, 0.1% (optional)
- Special feature:
  - Recording interval adjustable from 1 ms ... 10 s
  - No external voltage supply required
  - Data storage and evaluation directly via PC
- Data sheet: CT 05.01

**CPT6030**
**Analogue pressure transducer**
- Measuring range: 0 ... 0.025 to 0 ... 1,000 bar
- Accuracy: 0.025%
- Special feature:
  - Comp. temperature range -20 ... +75 °C
  - 4 ... 20 mA
  - DC 15 ... 28 V
  - Ingress protection IP67
- Data sheet: CT 25.14

**CPT61x0**
**Precision pressure sensor, standard version**
- Measuring range: 0 ... 0.025 to 0 ... 400 bar
- Accuracy: 0.01%, 0.025% (for CPT6140)
- Special feature:
  - RS-232 or RS-485 connection
  - Analogue output (optional)
  - Barometric measuring range: 552 ... 1,172 mbar abs., 0.01% of reading
  - Measuring rate of 4 ms at CPT6140
- Data sheet: CT 25.10, CT 25.11

**CPT9000, CPT6020**
**Precision pressure sensor**
- Measuring range: 0 ... 0.025 to 0 ... 1,000 bar
- Accuracy: CPT9000: 0.008%, CPT6020: 0.02%
- Special feature:
  - Comp. temperature range 0 ... +50 °C
  - RS-232 or RS-485
  - Measuring rate 20 ms
  - Barometric measuring range: 552 ... 1,172 mbar abs., 0.008% of reading
  - Resolution 100 ppb or better

**CPG2500**
**Precision pressure indicator**
- Measuring range: 0 ... 0.025 to 0 ... 2,890 bar
- Accuracy: 0.014%, 0.01% and 0.008%
- Special feature:
  - Up to 2 exchangeable, internal sensors and 1 external sensor of model CPT9000 or CPT6100
  - Barometric reference (optional)
  - Delta and leak test available
- Data sheet: CT 25.02

**CPA2501**
**Precision air data test indicator**
- Measuring range: Attitudes to 100,000 ft
- Accuracy: 0.01%, 0.009%
- Special feature:
  - RVSM-compliant
  - Ps, Qc, Ps/Pt or Ps/Qc configuration with virtual channels
  - Altitude and airspeed rate indication
- Data sheet: CT 29.02

Pressure controllers

Pressure controllers are electronic controllers which quickly and automatically provide a stable pressure reference. Due to the high accuracy and control stability, pressure controllers are especially suitable as references for production lines and laboratories, in order to carry out automatic testing and/or calibration of all types of sensors.

With pneumatic ranges from 1 mbar to 700 bar and hydraulic ranges up to 1,600 bar, the pressure controllers cover a wide range. Each controller represents a breakthrough in control and measurement technology to provide first-class measurement accuracy and highly stable pressure control.

### CPC2000
**Low-pressure version**
- Measuring range: 0 mbar to 1,000 mbar
- Accuracy: 0.1/0.3 % (for 0 mbar to 1 mbar)
- Medium: Ambient air
- Special feature: Integrated pressure generation, Integrated rechargeable battery
- Data sheet: CT 27.51

### CPC4000
**Industrial series**
- Measuring range: 0 mbar to 210 bar
- Accuracy: 0.02 %
- Control stability: 0.005 %
- Medium: Dry, clean air or nitrogen
- Special feature: Up to 2 sensors, Fast control speed, Leak test function, Automatic contamination protection (optional), Auto-channel for both controllers
- Data sheet: CT 27.40

### CPC6050
**Modular version**
- Measuring range: 0 mbar to 210 bar
- Accuracy: 0.01 %
- Control stability: 0.003 %
- Medium: Dry, clean air or nitrogen
- Special feature: Up to 2 control/measuring channels with 2 sensors each, Sensors exchangeable, Switch test function, Automatic contamination protection (optional)
- Data sheet: CT 27.62
### Pneumatic pressure controllers

#### CPC8000
- **Premium version**
- **Measuring range**: 0 ... 0.35 to 0 ... 400 bar
- **Accuracy**: 0.01 % ...
- **Control stability**: 0.002 %
- **Medium**: Dry, clean air or nitrogen
- **Special feature**:
  - Excellent control stability and pressure control without overshooting
  - Up to three interchangeable sensors
  - Optional barometer for automatic conversion of the pressure type
  - Control performance can be matched to application

#### CPC7000
- **High-pressure version**
- **Measuring range**: 0 ... 100 bar to 0 ... 700 bar
- **Accuracy**: 0.01 %
- **Control stability**: 0.008 %
- **Medium**: Nitrogen
- **Special feature**:
  - Robust and low-wear valve technology with long-term stability
  - Up to three interchangeable sensors
  - 6 x digital I/O
  - High-pressure safety

#### CPC8000-H
- **High-pressure version**
- **Measuring range**: 0 ... 100 to 0 ... 1,600 bar
- **Accuracy**: 0.014 % ...
- **Control stability**: 0.005 %
- **Medium**: Hydraulic oil or water
- **Special feature**:
  - High stability
  - Up to two interchangeable reference sensors
  - Automatic flooding
  - Hydraulic liquids available, e.g. Sebacate, Shell Tellus 22, Krytox, FC77

### Hydraulic pressure controller

#### CPC8000
- **Premium version**
- **Measuring range**: 0 ... 0.35 to 0 ... 400 bar
- **Accuracy**: 0.01 ... 0.008 %
- **Control stability**: 0.002 %
- **Medium**: Dry, clean air or nitrogen
- **Special feature**:
  - Excellent control stability and pressure control without overshooting
  - Up to three interchangeable sensors
  - Optional barometer for automatic conversion of the pressure type
  - Control performance can be matched to application

### For aviation

#### CPA8001
- **Air data test set**
- **Measuring range**: Altitudes to 100,000 ft
- **Speeds to 1,150 knots**
- **Accuracy**: 0.01 % ...
- **Control stability**: 0.002 %
- **Medium**: Dry, clean air or nitrogen
- **Special feature**:
  - Excellent control stability, even with rate control
  - Overload-free control
  - RVSM compatible
  - Configurations Ps/Pt, Ps/Qc

### WIKA-Cal
- **Calibration software, accessories for pressure controllers**
  - Creation of calibration certificates for mechanical and electronic pressure measuring instruments
  - Fully automatic calibration with pressure controllers
  - For the recording of certificate-relevant data in combination with the CalibratorUnits of the CPU6000 series
  - Determination of the required mass loads for pressure balances
  - Calibration of gauge pressure measuring instruments with absolute pressure references and vice versa

### An air data test set is an electronic controller which provides a pressure at a variable and adjustable rate.

Air data test sets are specifically developed to convert the pressure to be controlled into a height or rate of climb and velocity. As a result of the high accuracy, control stability and ability to simulate altitude and velocity, an air data test set is particularly suitable as a reference for aircraft workshops and also for instrument manufacturers and calibration laboratories in the aviation industry, in order to make calibrations on sensors and displays.
Pressure balances

Industrial series

Compact and competitively priced dead-weight testers for use on-site or for maintenance and service

The compact dimensions and low weight are key features of these dead-weight testers for their daily use in service and maintenance. With their integrated pressure generation and purely mechanical measurement principle, they are also specifically suited to on-site applications.

High-performance primary standards with excellent running characteristics for use in calibration laboratories

Through modern instrument design with excellent equipment features, the highest demands of operator convenience and performance are fulfilled. The selection of dual-range piston-cylinder systems with automated changing between ranges can ensure this measurement uncertainty over a large pressure range, even with a single measuring system.
Pressure balances

High-end version

High-accuracy and high-performance primary standards with excellent operating characteristics, based on the physical principle of Pressure = Force/Area

The direct measurement of the pressure (p = F/A), as well as the use of high-quality materials enable this small measurement uncertainty, in conjunction with an excellent long-term stability (recommended recalibration interval of five years in accordance with the German Calibration Service DKD/DAkkS). Furthermore, an automatic mass handling system and pressure generation ensure fully automatic calibration. The pressure balance has therefore been used for years in factory and calibration laboratories in industry, national institutes and research laboratories, and also in production by sensor and transmitter manufacturers.

**CPB6000**

Highest-accuracy primary standard

- Measuring range: 4 ... 5,000 bar
- Accuracy: 0.0035 ... 0.0015 %
- Medium: Dry, clean air, nitrogen or special oil
- Special feature: Different instrument variants for the highest demands

Data sheet: CT 32.01

**CPB6000DP**

Primary standard for differential pressure

- Measuring range: 30 ... 800 bar
- Accuracy: 0.005 ... 0.002 %
- Medium: Non-corrosive gases
- Special feature: For differential pressure measurements from 10 Pa to 800 bar

Data sheet: CT 32.02

**CPD8500**

Digital pressure balance

- Measuring range: 1 ... 500 bar (abs. and gauge)
- Accuracy: 0.005 ... 0.0035 %
- Medium: Non-corrosive, dry gases
- Special feature: Unique principle of operation based on SI units, Intuitive operator interface, Automatic calibrations, no mass handling needed, Automatic compensation of the environmental conditions

Data sheet: CT 32.05

High-end version

High-accuracy and high-performance primary standards with excellent operating characteristics, based on the physical principle of Pressure = Force/Area

The direct measurement of the pressure (p = F/A), as well as the use of high-quality materials enable this small measurement uncertainty, in conjunction with an excellent long-term stability (recommended recalibration interval of five years in accordance with the German Calibration Service DKD/DAkkS). Furthermore, an automatic mass handling system and pressure generation ensure fully automatic calibration. The pressure balance has therefore been used for years in factory and calibration laboratories in industry, national institutes and research laboratories, and also in production by sensor and transmitter manufacturers.

Calibration software

Easy and fast creation of a high-quality calibration certificate

The WIKA-Cal calibration software is used for generating calibration certificates or logger protocols for pressure measuring instruments and is available as a demo version for a cost-free download on the website. A template helps the user and guides him through the creation process of a document. Calibration certificates can be created with the Cal-Template and logger protocols can be created with the Log-Template.

In order to switch from the demo version to a full version of the respective template, a USB key with a licence upgrade has to be purchased. The pre-installed demo version automatically changes to the selected full version when the USB key is inserted and is available as long as the USB key is connected to the computer.

Three WIKA-Cal licences are available together with a precision pressure indicator.

The WIKA-Cal calibration software is available for online calibrations together with a PC. The scope of software functions depends on the selected licence. Several licences can be combined on one USB dongle.

Multicalibration

The additionally charged “Multicalibration” licence can be ordered in addition to Cal Light or Cal. With this, it is possible to calibrate, incl. documentation, up to 16 test items simultaneously. The prerequisite is that the test items are of the same instrument model, measuring range and accuracy. During the parallel calibration, the measuring window for each test item can be viewed via a table view.

For pressure sensors, it is possible to use either several multimeters (such as model CPU6000-M, for example) or a multiplexer to which all multimeters will be connected. As multiplexers, Agilent 34970A and Netscanner 9816 are supported. The correct cabling is the responsibility of the operator.
### Pressure generation

**Portable pressure generation**

Hand test pumps serve as pressure generators for the testing, adjustment and calibration of mechanical and electronic pressure measuring instruments through comparative measurements. These pressure tests can take place in the laboratory or workshop, or on-site at the measuring point.

Laboratory version

Comparison test pumps serve as pressure generators or controllers for the testing, adjustment and calibration of mechanical and electronic pressure measuring instruments. Due to their stable case, these test pumps are particularly suitable for stationary use in laboratories or workshops.

**CPP120-X**
- **Pneumatic comparison test pump**
- Measuring range: 0 ... 120 bar
- Medium: Clean, dry, non-corrosive gases
- Special feature:
  - Accurate pressure setting
  - Robust industrial series
  - External initial pressure supply necessary
- Data sheet: CT 91.03

**CPP1200-X**
- **Hydraulic comparison test pump**
- Measuring range: 0 ... 1,200 bar
- Medium: Oil or water
- Special feature:
  - Integrated tank
  - Dual-area spindle pump
  - Robust industrial series
- Data sheet: CT 91.08

**CPP4000-X**
- **Hydraulic comparison test pump**
- Measuring range: 0 ... 1,200 bar
- Medium: Oil or water
- Special feature:
  - Integrated tank
  - Dual-area spindle pump
  - Robust industrial series
- Data sheet: CT 91.09

**CPP1000-X, CPP1600-X**
- **Hydraulic comparison test pump**
- Measuring range: 0 ... 1,000 to 0 ... 1,600 bar
- Medium: Oil or water
- Special feature:
  - Integrated tank
  - Robust laboratory version with priming pump
  - Compact industrial series with priming pump
- Data sheet: CT 91.12

**CPP7000-X**
- **Hydraulic comparison test pump**
- Measuring range: 0 ... 7,000 bar
- Medium: Sebacate oil
- Special feature:
  - Integrated tank
  - Robust laboratory version with priming pump
- Data sheet: CT 91.13

Reference thermometers

Highly accurate temperature measurement with reference thermometers

Reference thermometers (standard thermometers) are, due to their excellent stability and their geometrical adaptations, ideally suited for applications in industrial laboratories. They enable easy comparative calibration in baths, in tube furnaces and in dry-well calibrators. The advantage of reference thermometers is the wide temperature range, and with this, their flexible operation. Furthermore, with their low drift, a long service life is ensured.

**CTP2000**
*Platinum resistance thermometer*

- Measuring range: -200 ... +450 °C
- Stability: < 50 mK after 100 h at 450 °C
- Dimensions: Ø 4 mm, l = 500 mm
- Special feature: 4-wire connection, Ends with 4 mm banana plugs
- Data sheet: CT 61.10

**CTP5000**
*Reference thermometer*

- Measuring range: -196 ... +660 °C
- Probe type: Pt100, Pt25
- Dimensions: Depending on version
- Special feature: Flying leads, DIN or SMART connector
- Data sheet: CT 61.20

**CTP5000-T25**
*Reference thermometer*

- Measuring range: -189 ... +660 °C
- Probe type: Pt25
- Dimensions: d = 7 mm, l = 480 mm
- Special feature: Flying leads, DIN or SMART connector
- Data sheet: CT 61.25

**CTP9000**
*Thermocouple*

- Measuring range: 0 ... 1,300 °C
- Thermocouple: Type S per IEC 584, class 1
- Dimensions: Ø 7 mm, l = 620 mm
- Special feature: Cold junction optional, 2,000 mm cable
- Data sheet: CT 61.10
Hand-helds

Hand-helds are portable calibration instruments for mobile use for the accurate measurement and recording of temperature profiles. For the instruments there are various designs of thermometers available. Through this, hand-helds are particularly suitable as test instruments for a large variety of applications in the widest range of industries.

Data recorded in the hand-held can be evaluated via PC software, some instruments document calibrations in the internal memory, which are later read on a PC. Optionally, a calibration certificate can be generated with our calibration software WIKA-Cal.

Further information at www.wika.com
Calibration baths are electronic controllers which automatically, quickly and with the help of a liquid supply a temperature. Due to the high reliability, accuracy and exceptional homogeneity in the measuring chamber, calibration baths are particularly suitable as a factory/working standard for the automatic testing and/or calibration of the widest range of temperature probes - independent of diameter. A special micro calibration bath design enables on-site applications.

### CTB9100
**Micro calibration bath**
- **Measuring range**: -35 ... +255 °C
- **Accuracy**: ±0.2 ... 0.3 K
- **Stability**: ±0.05 K
- **Special feature**: Short heating and cooling times, Easy to use
- **Data sheet**: CT 46.30

### CTM9100-150
**Multi-function calibrator**
- **Measuring range**: -35 ... +165 °C depending on the application
- **Accuracy**: ±0.3 K ... 1 K depending on the application
- **Immersion depth**: 150 mm
- **Special feature**: Use as a dry-well calibrator, micro calibration bath, infrared calibrator and surface calibrator
- **Data sheet**: CT 41.40

### CTB9500
**Calibration bath, low measuring range**
- **Measuring range**: -45 ... +200 °C
- **Stability**: ±0.02 K
- **Immersion depth**: 200 mm
- **Medium**: Water, oil or similar media
- **Data sheet**: CT 46.20

### CTB9400
**Calibration bath, medium measuring range**
- **Measuring range**: 28 ... 300 °C
- **Stability**: ±0.02 K
- **Immersion depth**: 200 mm
- **Medium**: Water, oil or similar media
- **Data sheet**: CT 46.20
Portable temperature calibrators

Efficient calibration with temperature calibrators from WIKA

Portable temperature calibrators (dry-well calibrators) are electronic controllers which automatically, quickly and dryly supply a temperature. Due to the high reliability, accuracy and simple operation, portable temperature calibrators are particularly suitable as a factory/working standard for the automatic testing and/or calibration of temperature measuring instruments of all types.

CTD9100
Temperature dry-well calibrator

CTD4000
Temperature dry-well calibrator

CTD9100-1100

Resistance thermometry bridges

By using built-in or external standard resistors, resistance thermometry bridges measure resistance ratios with high accuracy, which are indicative of the temperature, among other things. These instruments are not only used in the field of temperature measurement, but – due to their high accuracy – also in electrical laboratories.

**CTR2000**
Precision thermometer

- Measuring range: -200 ... +962 °C
- Accuracy: ±3 mK (full range)
- Probe type: PRT, thermistors or fixed resistors
- Special feature: Expandable to up to 60 channels (optional)
- Internal resistors 25 Ω, 100 Ω, 10 kΩ
- Data sheet: CT 60.30

**CTR3000**
Multi-functional precision thermometer

- Measuring range: -210 ... +1,820 °C
- Accuracy: ±0.005 K (4-wire), ±0.03 K (3-wire), ±0.004 % + 2 µV for thermocouples
- Probe type: Pt100, Pt25
- Special feature: Versatile applications by measuring thermocouples and resistance thermometers
- Logger and scan functions
- Up to 44 channels possible
- Data sheet: CT 60.15

**CTS3000**
Multiplexer

- Measuring range: -210 ... +1,820 °C
- Accuracy: ±0.005 K (4-wire), ±0.03 K (3-wire), ±0.004 % + 2 µV for thermocouples
- Probe type: Pt100, Pt25
- Special feature: No loss of accuracy
- Various coupler connector connectable
- Complete automatic calibration routines controllable
- Data sheet: AC 87.01

**CTR6000**
DC resistance thermometry bridge

- Measuring range: -200 ... +962 °C
- Accuracy: 0.1 ... 1.25 mK depending on resistance ratio
- Probe type: SPRT, PRT or fixed resistors
- Special feature: Expandable to up to 60 channels (optional)
- Internal resistors 25 Ω, 100 Ω
- AC technology
- Data sheet: CT 60.40

**CTR6500**
AC resistance thermometry bridge

- Measuring range: -200 ... +962 °C
- Accuracy: 0.01 K, optional 0.005 K
- Probe type: SPRT, PRT or fixed resistors
- Special feature: Expandable to up to 60 channels (optional)
- 4 selectable standby currents possible (optional)
- AC technology
- Data sheet: CT 60.80

**CTR9000**
Primary-standard resistance thermometry bridge

- Measuring range: 0 ... 260 Ω
- Accuracy: 0.01 K, optional 0.005 K
- Probe type: SPRT, PRT or fixed resistors
- Special feature: Expandable to up to 60 channels (optional)
- 4 selectable standby currents possible (optional)
- AC technology
- Data sheet: CT 60.80
Standard reference resistors, AC/DC

**Electrical comparison standard**

Reference resistors with high-accuracy, fixed resistance values, which are used in connection with resistance thermometry bridges. They are also used as standards in accredited electrical laboratories.

Accessories

From individual components ... to complete turnkey kits

The following accessory components are the ideal complement to the individual calibration instruments. Thus a complete solution is not only quickly and easily configured, but can also be installed in the same manner. The various packages complete the product programme for calibration technology and can be used in many different applications.

Customer-specific drilled inserts, silicone oil suited for calibration in micro calibration baths and interface cables complete the product portfolio for temperature.

You can find a detailed description in our catalogue “Accessories for calibration technology”.

Engineered solutions

Test and calibration systems for workshops and laboratories

For the fitting-out of calibration laboratories, we offer individually designed test workstations. Here we integrate proven calibration systems from our extensive product range into ergonomic workstations. These can be individually equipped with the following components:

- 19” calibration racks in modular design for pressure sensors
- Connection columns with quick-release fasteners for test items and references with exchangeable threaded inserts
- Electric and pneumatic power strips with 230-V voltage supply and compressed air with air blow gun connection including pressure regulator
- Work panel for setting the operating pressure with inlet pressure gauge, outlet pressure gauge and alternative pressure supply
- PC workstations

Test and calibration systems for production

The complete solutions are available in the widest range of automation levels incl. tempering units, workpiece transport systems, workpiece fixtures and electrical and pressure-side contacting.

The focus is on the precise interaction of measurement technology, testing system mechanics and control components. In addition, the actual testing and adjustment processes can also be combined with mounting and labelling processes.
We offer individual and turnkey solutions in various degrees of automation for a wide variety of applications, from simple test equipment through semi-automatic test benches to fully automated testing systems. The testing processes can also be combined with assembly processes, laser marking, automated parts handling (infeed/outfeed) - in addition, the chaining of several stations is possible.

**Pneumatic or helium leak testing**
on fittings, valves, hoses, coolers, pumps, filters and many other test parts.

**Pressure function tests or setting procedures**
among other things for
Control pressure of pressure reducers or thermostat control valves
- The cracking pressure of safety relief valves
- Switch points of pressure switches and control valves
- Pressure containment of different components

**Test methods**
- Integral vacuum methods
- Accumulation methods (under atmosphere)
- Sniffing test

---

**Leak and pressure function test systems for production**

Immediate help in case of failures/malfunctions

For the shortest response times and efficient problem analysis we offer a remote service via smart glasses. Using smart glasses, our specialists can efficiently analyse the problem and take quick targeted corrective action, so you benefit from reduced downtime and costs.

Preventive maintenance

Through regular system maintenance, premature wear can be prevented and the risk of system downtime can be minimised. We are happy to advise you regarding the ideal maintenance intervals and to design an individual maintenance package for you.

Service hotline: +49 9372 132 5049

Calibration service

Our calibration laboratory has been accredited for pressure for almost 40 years and for temperature for almost 30 years. Since 2014, our calibration laboratory has also been accredited for the electrical measurands DC current, DC voltage and DC resistance. Since 2020, our calibration laboratory at tecsis has been accredited for force.

Manufacturer-independent calibration - fast and precise for ...

-1 bar ... +10,000 bar
- Calibration using working standards (precise electrical pressure measuring instruments) or high-accuracy reference standards (pressure balances)
- With an accuracy down to 0.003 % of reading for the standard used
- In accordance with the directives DIN EN 837, DKD-R 6-1 or EURAMET cg-3

Certified to ISO 9001 and ISO 14001
- DAkkS accredited (in accordance with DIN EN ISO/IEC 17025)
- Cooperation in the DKD working groups
- Over 60 years of experience in pressure and temperature measurement
- Highly qualified, individually trained personnel
- Latest reference instruments with the highest accuracy

### Service

In order to have the least possible impact on the production process, we offer you a time-saving, on-site DAkkS calibration, throughout Germany, in the mobile calibration laboratory and on-site.

- 1 kN … 200 kN with a measurement uncertainty of 0.1 % in tension and compression force direction in accordance with DIN EN ISO 376 (calibration certificate per ISO 17025)
- 500 N … 6 MN with a system accuracy of 0.5 % in tension and compression force direction (3.1 inspection certificate in accordance with DIN EN 10204)

### Current, voltage, resistance

- DC current from 0 mA ... 100 mA
- DC voltage from 0 V ... 100 V
- DC resistance from 0 Ω ... 10 kΩ
- In accordance with the directives VDI/VDE/DGQ/DKD 2622

### Force

- Mobile and on-site (pressure and temperature)

### Length

- 3.1 inspection certificate (factory calibration)
- Replacement of the measuring device if required
- Calibration of special-purpose gauges in accordance with customer drawings
- Calibratable measuring devices
  - Caliper gauges to 800 mm
  - Testing pins to 100 mm
  - Ring gauges and plug gauges to 150 mm
  - Tapered thread gauges to 150 mm
  - Gauge blocks to 170 mm
  - Others on request

### Mobile and on-site (pressure and temperature)

In order to have the least possible impact on the production process, we offer you a time-saving, on-site DAkkS calibration, throughout Germany, in the mobile calibration laboratory and on-site.

- In our calibration van or on your workbench
- With a DAkkS accreditation for pressure
  - from -1 bar … +8,000 bar
  - with accuracies down to 0.01 % of full scale for the standard used
- With a DAkkS accreditation for temperature from -55 °C … +1,100 °C
Service for diaphragm seal systems

Diaphragm seal systems are used for demanding measuring requirements with extreme medium temperatures of -90 °C up to +400 °C in the process industry. The diaphragm seal assemblies protect the measuring instrument from aggressive, corrosive, heterogeneous, abrasive, highly viscous or toxic media.

With this service, the total costs of the diaphragm seal system can be clearly lowered. In this way, the service life of the measuring instrument can be fully utilised and only the diaphragm seal assembly needs replacement or repair, preventatively or after failure.

With a preventative repair, scheduled in line with planned shutdowns to your plant, you can reduce downtimes.

Services covered
- Replacement service for diaphragm seal systems with process transmitters or mechanical measuring instruments
- Repair of the defective parts
- Optimisation of the existing diaphragm seal system

Your benefits
- Cost and time saving
- Functional test of a process transmitter
- Current material certificate
- New calibration of the entire system
Field service for temperature applications

Supervision, installation, welding work, troubleshooting, repair, analysis & inspection

Our qualified personnel support you with the on-site installation and commissioning of your instrumentation, as well as being a competent and available service partner.

We are the right contact for both new projects and maintenance measures at shutdowns, as well as in the event of an unplanned interruption.

Our practically experienced service team ensures that your processes can be operated safely and efficiently and thus meet the demands on you.

Through our local experts, we can be reached worldwide, are quickly available and tuned to individual circumstances.

Your benefits
- Short downtimes
- Fast commissioning
- Ensuring process safety
- Extended warranty possible
- Compliance with local safety instructions
- Environmentally conscious handling
In our segment brochures, you will find the entire product families for the areas of “ventilation and air-conditioning”, “sanitary applications”, “SF₆ lifecycle solutions” and “high purity & ultra high purity” and also their technical distinctions.
